Grain for quality evaluations was from one harvest at Freeville , NY in 2014.

Emmer variety quality for pasta and cooked grain

Needs

Parental Evaluation

Genetic Improvement

Emmer varieties for pasta making

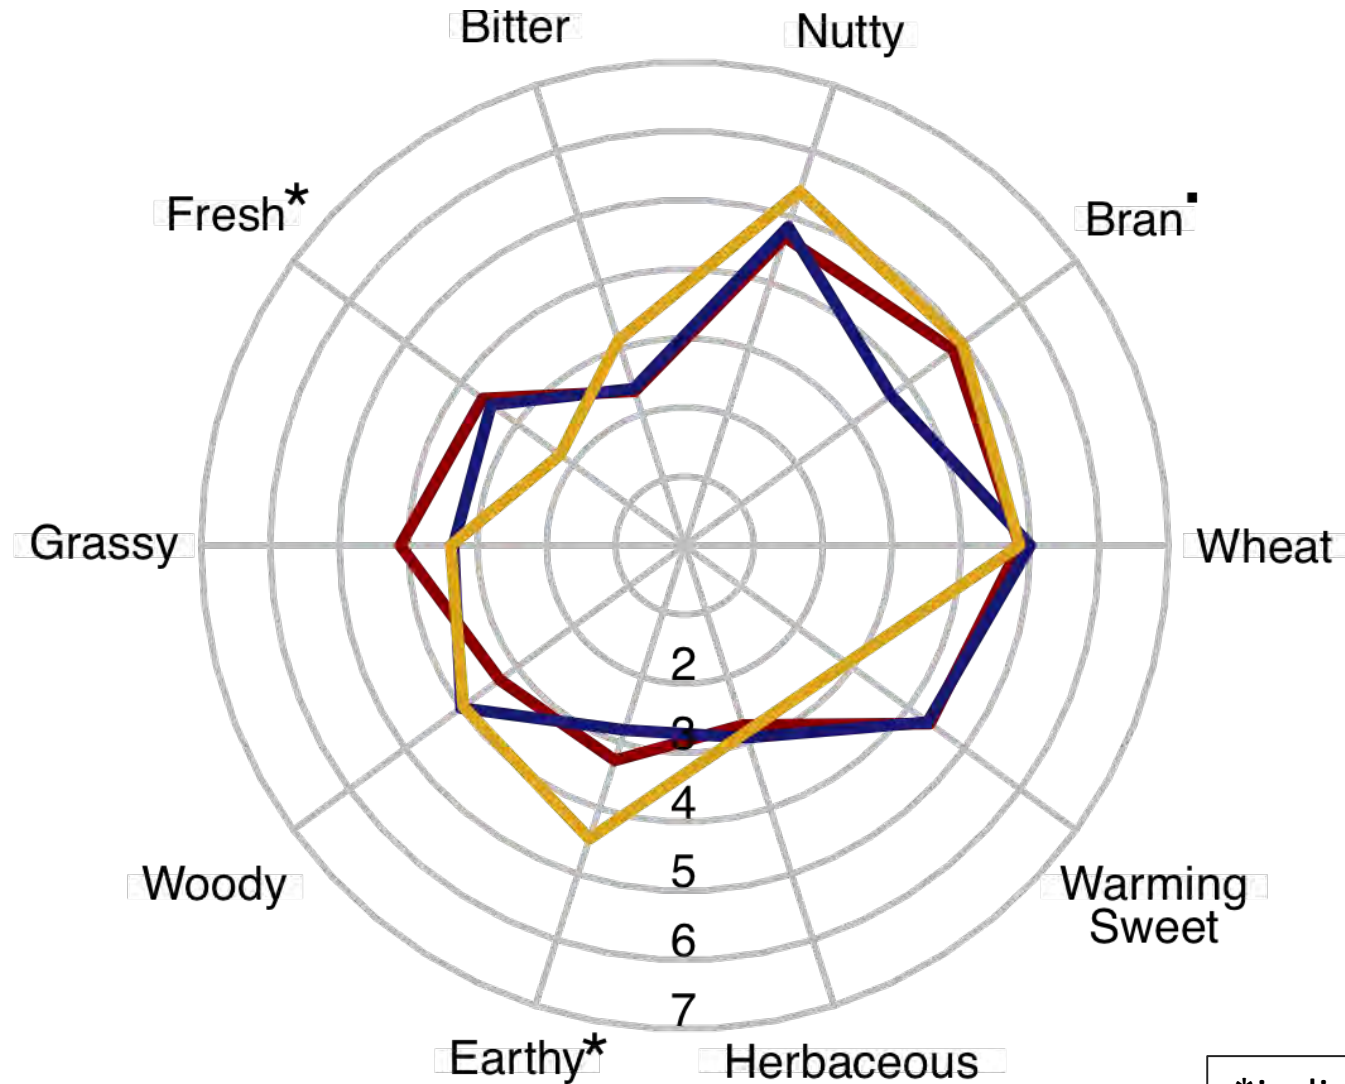

Lucille (score 7) – best technical performance, strong, easy to roll out and cut with the machine.

Red Vernal (score 7) – less hydration, best texture, the pasta chef liked the flavor

North Dakota Common (score 5) – very tacky dough, needed a lot of flour to roll out and took longer to get the right texture.

Black-glumed Emmer (score 3) – tore very easily, tacky, hard to work with, stuck to the machine and took a long time to roll out.

Amylase-Trypsin Inhibitors

Among Species and Genotypes of Wheat
(Celiac Disease, Wheat Allergy, and NCWS)

Meta-analysis of five studies (Bedetti et al. 1974; Vittozzi and Silano 1976; Sánchez-Monge et al. 1996; Wang et al. 2007; Zoccatelli et al. 2012). Max, min, and mean (black lines) values presented. Labels “n=” refer to the number of unique varieties evaluated. Values for ATIs were normalized to a relative scale by converting reported average values for modern wheat in each study to a common value.

Questions?

We thank Wide Awake bakery for hosting and Jeffrey Hamelman of King Arthur Flour for facilitating the sourdough baking trial, Gramercy Tavern for hosting the pasta making trial, The Natural Gourmet Institute for hosting the emmer sensory evaluation, Bread Alone Bakery for hosting the soft wheat baking trial, and Culinary Institute of America for hosting the soft wheat sensory evaluation. Finally, we thank the many farmers, millers, bakers, and tasters who dedicated time and effort to participate in this research.
