		On average the temperature on the ground under the floating row cover was 4.44 degrees higher than the top of the row cover for the night-time low.													
		On average the temperature at the top of the floating row cover was 8.86 degrees higher than on the ground at the peak temperature of the day.													
		On average the difference between the temperature on the ground outside and under the FRC was 20.89 degrees higher.													
		On average the difference between the temperature on the ground outside and the top of the floating row cover was 29.76.
