Preface

This directory is a compilation of farmers and other producers in Pennsylvania who grow and market warm season grasses for various purposes. Primarily, warm season grasses include the following:

- **switchgrass**
- **big blue stem**
- **Indian grass**
- **miscanthus**

A few years ago a group of producers, individuals, and related businesses met at the urging of Penn State Extension to discuss how to improve markets for warm season grasses, especially within Pennsylvania's farm community. The Association of Warm Season Grass Producers (AWSGP) resulted from that effort.

The Association has four primary objectives:

- **To promote the planting and use of warm-season grasses**
- **To work to maximize the profitability of these crops for farmers**
- **To assist in educating growers on the implementation of best practices for managing and harvesting these crops**
- **To support and encourage entrepreneurial activities that further develop the use of warm-season grasses in all areas of agriculture**

Growing warm season grass has appeal as both a conservation and a commercial crop. Its perennial growth behavior and robust rooting system makes it a versatile crop for controlling soil erosion, preventing nutrient runoff, and sequestering carbon in the soil. With few inputs it grows capably on marginal lands. High yields of this perennial crop (up to 5 tons/acre/year) makes it an attractive option for fiber markets. It has been used as a feedstock for bioenergy production, as forage material, and as a substitute for wheat straw and similar feedstocks in many applications, including livestock bedding, mulch, and landscape erosion prevention.

The demand for warm season grasses currently exceeds known supply. The Association is conducting this survey to locate grass producers in Pennsylvania. Through the Northeast Sustainable Agriculture Research and Education Program, the Association received a grant to do this survey, exhibits, and other outreach activities under subaward number ONE18-320. The grant helped determine who is producing, numbers of acres planted, and if these acres are enrolled in government programs such as the Conservation Reserve Program. All this information will help us to better market warm season grass throughout Pennsylvania's farm community.

Future Participation

The Association continues to locate and survey other Pennsylvania warm season grass producers. Grass growers are encouraged to contact the Association with names of other growers. If others would like to be included in this directory, if errors are found within this directory, or if other suggestions can be made to improve the directory; please send contact information and suggestions to the Association of Warm Season Grass Producers at www.awsqp.org
