University programs, activities, and facilities are available to all without regard to race, color, sex, gender identity or expression, sexual orientation, marital status, age, national origin, political affiliation, physical or mental disability, religion, protected veteran status, genetic information, personal appearance, or any other legally protected class.

In accordance with Federal law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, this institution is prohibited from discriminating on the basis of race, color, national origin, sex (including gender identity and sexual orientation), religion or creed, disability, age, political beliefs, or reprisal or retaliation for prior civil rights activity. To file a program discrimination complaint, a complainant should complete a Form AD-3027, USDA Program Discrimination Complaint Form, which can be obtained online at <https://www.usda.gov/sites/default/files/documents/ad-3027.pdf> from any USDA office, by calling (833) 620-1971, or by writing a letter addressed to USDA. The letter must contain the complainant's name, address, telephone number and a written description of the alleged discrimination action in sufficient detail to inform the Assistant Secretary for Civil Rights (ASCR) about the nature and date of an alleged civil rights violation. The completed AD-3027 form or letter must be submitted to:

Food and Nutrition Service, USDA
1320 Braddock Place, Room 334
Alexandria, VA, 22314, or
fax:
(833) 256-1865 or (202) 690-7442; or
email:
FNIS/CIVILRIGHTS/COMPLAINTS@usda.gov
This institution is an equal opportunity provider.

Conforme a la ley federal y las políticas y regulaciones de derechos civiles del Departamento de Agricultura de los Estados Unidos (USDA), esta institución tiene prohibido discriminar por motivos de raza, color, origen nacional, sexo (incluyendo identidad de género y orientación sexual), credo religioso, discapacidad, edad, creencias políticas, venganza o represalia por actividades realizadas en el pasado relacionadas con los derechos civiles.

Para presentar una queja por discriminación en el programa, el reclamante debe completar un formulario AD-3027, Formulario de queja por discriminación del programa del USDA, que se puede obtener en línea, en <https://www.usda.gov/sites/default/files/documents/ad-3027.pdf> en cualquier oficina del USDA, llamando al (833) 620-1971, o escribiendo una carta dirigida al USDA. La carta debe contener el nombre, la dirección y el número de teléfono del reclamante, y una descripción escrita de la supuesta acción discriminatoria con suficiente detalle para informar al Subsecretario de Derechos Civiles (ASCR) por sus reglas en regla sobre la naturaleza y la fecha de la presunta violación de los derechos civiles. La carta o el formulario AD-3027 completado debe enviarse a:
correo postal:
Food and Nutrition Service, USDA
1320 Braddock Place, Room 334
Alexandria, VA, 22314, o
fax:
(833) 256-1865 o (202) 690-7442; o
correo electrónico:

- Farm Resources
- Management System
- Be Flexible!

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Selecting Forages for Pasture

A good grazing system begins with a forage system that allows the maximum number of grazing days per year with forages that are suited to the land, the livestock, and the manager.

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Selecting Forages for Pasture

- Grasses
- Legumes
- Forbs
- Perennials
- Annuals

Selecting Forages for Pasture

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Cool Season Perennials

Orchardgrass

A bunch-type, tall-growing, cool-season perennial grass. It is one of the most productive cool-season grasses, tolerant to shade, fairly drought resistant with moderate winter hardiness.

Orchardgrass

Does not exhibit as much tolerance to drought or winter hardiness as tall fescue and brome grass. Orchardgrass is well adapted to grow with legumes such as alfalfa, red clover, lespedeza and white clover.

UNIVERSITY OF
MARYLAND
EXTENSION **FEARLESSLY
FORWARD**

Orchardgrass

It establishes more easily than brome grass or timothy when seeded with other species. Stands will be more productive and last longer than brome grass or timothy when grown with alfalfa that is cut frequently and heavily fertilized.

UNIVERSITY OF
MARYLAND
EXTENSION **FEARLESSLY
FORWARD**

Orchardgrass

Will persist and make reasonable yields on soils that have moderately poor drainage. It will not tolerate wet areas as well as reed canarygrass or tall fescue.

UNIVERSITY OF
MARYLAND
EXTENSION

FEARLESSLY
FORWARD

Tall Fescue

- A bunch-type grass, but will spread slowly to form a dense sod.
- It is deep-rooted.
- Prefers the cool temperatures of spring and fall, and grows poorly in mid-summer, which gives rise to the term "summer slump."
- It tolerates excessive moisture and drought as well as acidic (pH 5.4 - 6.2), low fertility soils.
- Begins spring growth when average daily temperatures remain above 40 F for several days.
- It is not completely dormant at lower temperatures; thus, there may be fescue growth in many states from early March to December.
- A good species to use in areas that receive heavy livestock traffic.

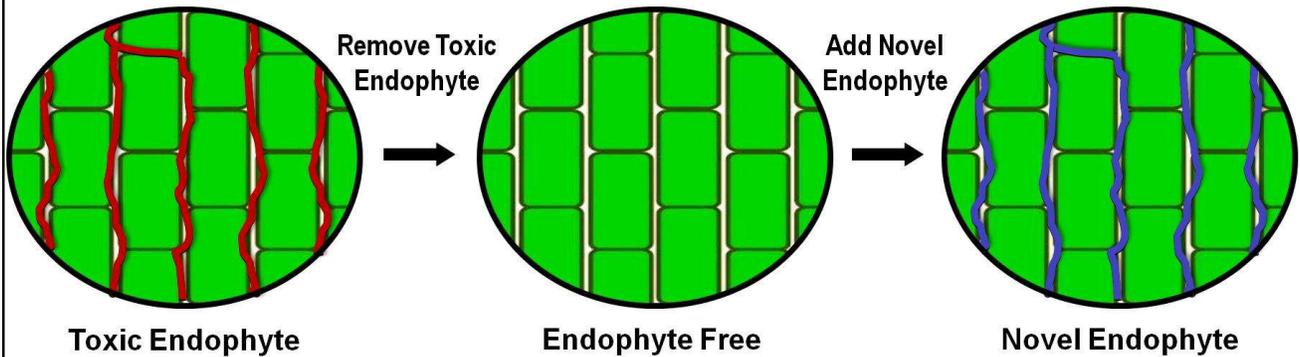

UNIVERSITY OF
MARYLAND
EXTENSION

FEARLESSLY
FORWARD

Selecting Forages for Pasture

Tall Fescue

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Kentucky 31

Most common variety.
Endophyte infected.
Wide blades, pronounced veins, serrated edges.
Symptoms such as nervousness, rough hair coat, elevated body temperature, reduced weight gain, and low conception rates.
Interseed legumes or other grasses.

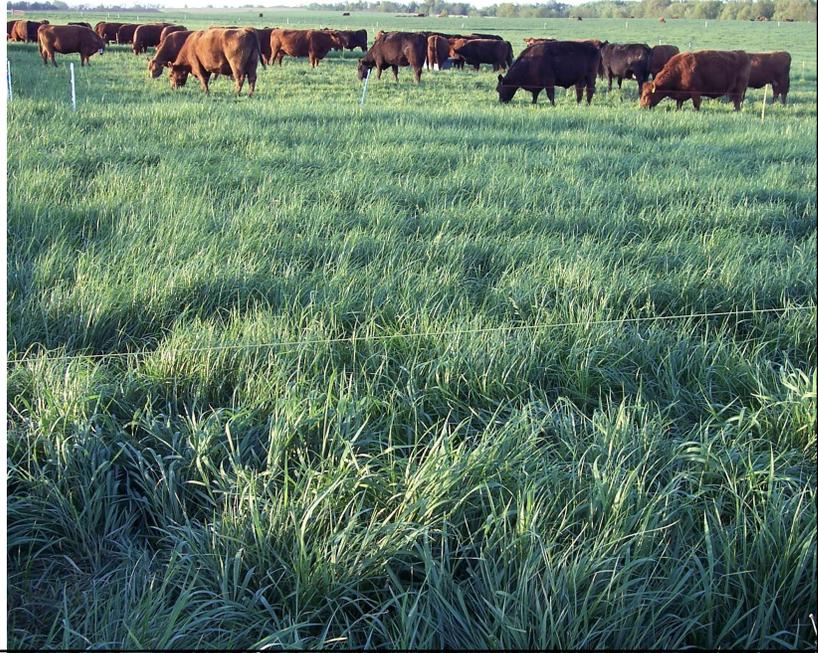

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Tall Fescue

Low Endophyte

Endophyte Free

Novel Endophyte

UNIVERSITY OF
MARYLAND
EXTENSION **FEARLESSLY
FORWARD**

Kentucky Bluegrass

High quality forage grass.
Most of its growth in the spring and fall when the weather is cool and adequate soil moisture is available. Becomes semi-dormant in the hot summer months. By doing so it avoids drought damage, but becomes relatively unproductive. Unlike these other cool season grasses, spreads by rhizomes. Withstands overgrazing

UNIVERSITY OF
MARYLAND
EXTENSION **FEARLESSLY
FORWARD**

Timothy

Short lived bunch grass.
 The root system is shallow and fibrous. Up to 80% of the root mass has been found in the top 2 inches (5 cm) of soil.
 Susceptible to disease and insects.
 Good companion for brome grass.
 Better for hay than grazing.

UNIVERSITY OF
MARYLAND
 EXTENSION **FEARLESSLY FORWARD**

Bromegrass

- A leafy, sod-forming perennial grass that is best suited for hay or early spring pasture.
- It is deep-rooted and spreads by underground rhizomes.
- The most widely used cool-season grass in North America.
- It is grown extensively in Canada and the north-central United States.
- Survives periods of drought and extremes in temperature.
- It matures somewhat later in the spring and makes less summer growth than orchardgrass.
- Forage quality of smooth bromegrass compares well with other cool-season grasses, being affected primarily by stage of maturity.

UNIVERSITY OF
MARYLAND
 EXTENSION **FEARLESSLY FORWARD**

Selecting Forages for Pasture

Perennial Ryegrass

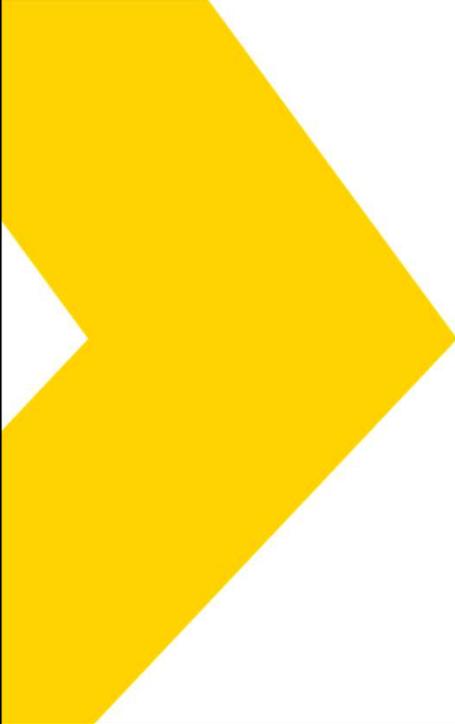

- A leafy, sod-forming perennial grass that is best suited for hay or early spring pasture.
- It is deep-rooted and spreads by underground rhizomes.
- The most widely used cool-season grass in North America.
- It is grown extensively in Canada and the north-central United States.
- Survives periods of drought and extremes in temperature.
- It matures somewhat later in the spring and makes less summer growth than orchardgrass.
- Forage quality of smooth brome grass compares well with other cool-season grasses, being affected primarily by stage of maturity.

Reed Canarygrass

- A tall, leafy, high-yielding perennial.
- It is a cool-season grass which is greater in winter hardiness and more resistant to foliar diseases than other cool-season grasses.
- Plants spread and thicken from short rhizomes, creating a dense sod.
- If not grazed or clipped, plants will reach heights exceeding 6 feet under high fertility conditions.
- Does well on most soils except droughty sands.
- It is a “natural” for poorly drained soils because of its tolerance to flooding and standing water.
- In addition to its adaptation to wet sites, reed canarygrass is one of the most drought-tolerant of the cool-season grasses.

Cool Season Annuals

Oats

Makes excellent feed and can be seeded in early spring or late summer.
Spring oats should be sown as soon as the ground can be worked in late winter or early spring.
The earlier conditions permit increases the chances for high yields.
May be seeded as late as early April for use as a companion crop.

Oats

Summer seeding rates seedings should be slightly higher, 90 to 100 pounds/acre, with higher rates the later into September. Higher seeding rates result in smaller stem size and can produce more digestible fiber. Seedings can be made at any time in August but should be completed by mid September. Harvest will occur approximately 60 to 75 days after seeding. By staggering seeding dates, harvest can be more manageable.

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

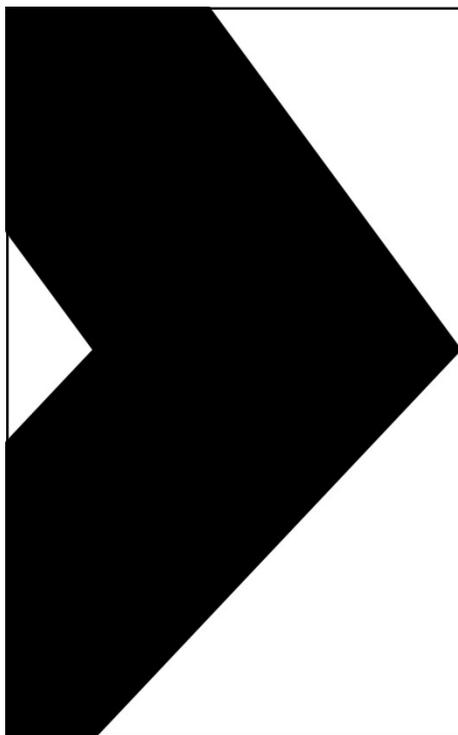

Annual/Italian ryegrass

Can be interseeded.
Some fall grazing.
Nitrogen hog.
First to graze in the spring.
The high forage quality and rapid regrowth of annual ryegrass leads to improved livestock production at a lower cost over stored forage.

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Winter Cereals

Winter Cereals

- Barley
- Rye
- Triticale
- Spelt
- Wheat

Festulolium

True hybrid cross of fescue and ryegrass. Some varieties favor fescue while others favor ryegrass. Short lived perennial. High quality forage.

Clover

- Crimson Clover
- Red Clover
- White Clover
- Ladino
- Arrow Leaf

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Birdsfoot Trefoil

A perennial that adapts well to production on poorly drained, low-pH soils. It can reseed itself, is resistant to *Phytophthora* root rot and numerous alfalfa insects, responds well to fertilization, and does not cause bloat in animals.

UNIVERSITY OF MARYLAND EXTENSION **FEARLESSLY FORWARD**

Lespedeza

Sericea lespedeza is an erect, deep-rooted perennial legume that persists for many years.

A high-tannin forage (4–15% DM) scientifically proven to reduce parasite loads in sheep and goats.

Sericea lespedeza is on the noxious weed list in some states.

UNIVERSITY OF

Evaluating Stands

Seeding success may not be obvious from visual observation. Use the chart below to determine whether your first-year stand is adequate. Lay a square-foot frame, or a circular frame with a 42.5-inch circumference on the ground. Count the number of seedlings within the frame, taking at least 10 counts for each 10 acres, in representative areas of the field. The table is based on pure stands; if a mixture of grass and legume is planted, reduce the numbers by the ratio of each species planted.

Inadequate stands should be re-seeded. When a stand is judged to be between adequate and inadequate, it should be reevaluated after the second growing season. Warm-season grasses may need to be evaluated after the third growing season.

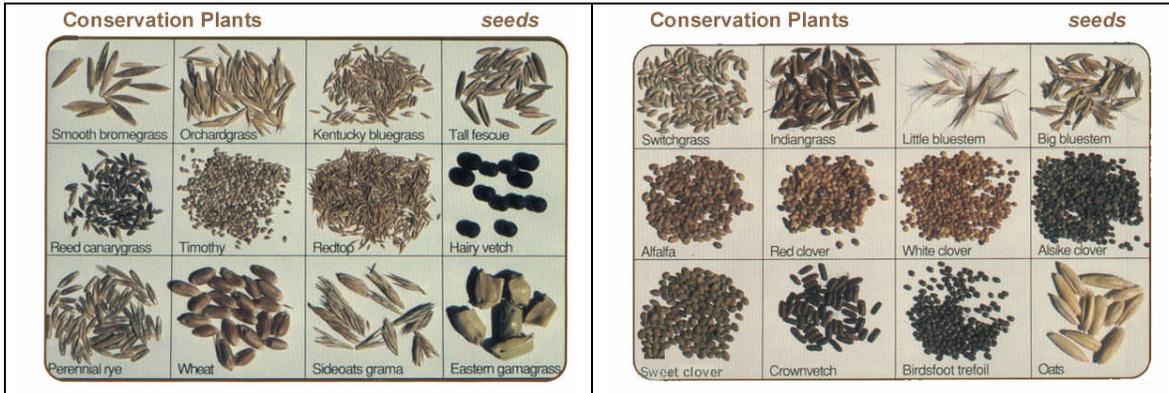

Conservation Plants		evaluating stands					
Species	Use	Seedlings needed per square foot					
		Critical areas		Forage		Idle land	
		A	N	A	N	A	N

Seeds

Early ID -- Seed is Key

Grasses can be very difficult to identify in early growth stages. The seed may be the best identify aid. A seed retains its form and position in the ground through the seedling's early growth stages. To identify a seedling, carefully dig it up and compare it to photographs or actual seeds.

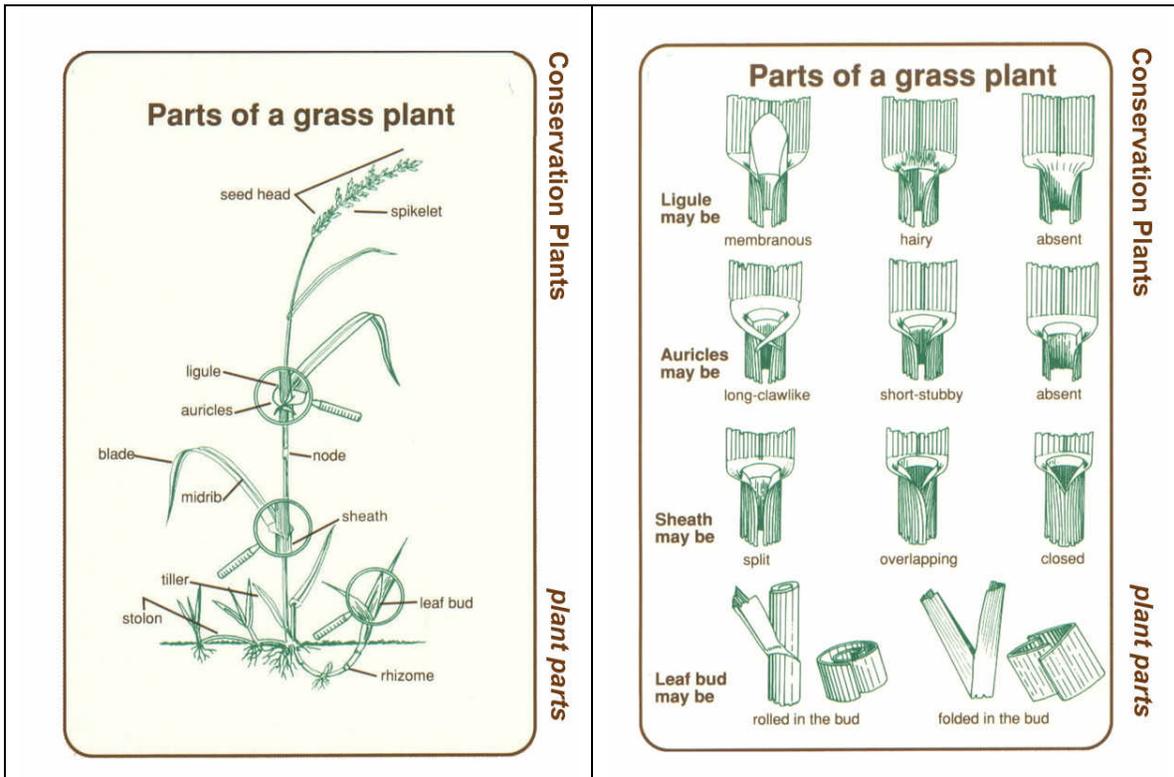

Plant	Number of seeds per pound	Number of seeds to be found in a square foot per pound seeded*
Alfalfa	200,000	5
Alsike clover	700,000	16
Annual ryegrass	227,000	5
Big bluestem	165,000	4
Birdsfoot trefoil	400,000	9
Cereal rye	18,000	.4
Crownvetch	110,000	3
Eastern gamagrass	7,280	.2
Hairy vetch	20,000	.5
Indiangrass	175,000	4
Kentucky bluegrass	2,177,000	50
Little bluestem	260,000	6
Oats	13,000	.3
Orchardgrass	654,000	15
Perennial ryegrass	227,000	5
Red clover	275,000	6
Redtop	4,990,000	114
Reed canarygrass	533,000	12
Sideoats grama	191,000	4
Smooth bromegrass	136,000	3
Sweet clover	260,000	6
Switchgrass	389,000	9
Tall fescue	207,000	5
Timothy	1,230,000	28
Wheat	15,000	.3
White clover	800,000	18

Example: If the recommendation is to plant 8 pounds of big bluestem per acre, expect to find about 32 seeds in a square foot.

Conservation Plants

The Elsberry Plant Materials Center

The Elsberry Plant Materials Center is a 243-acre facility near Elsberry, Missouri. The Center, operated by the US Department of Agriculture, Soil Conservation Service, serves the states of Iowa, Illinois and Missouri.

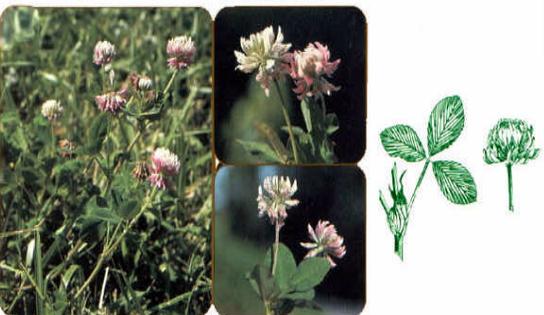

The center is examining more than 1,000 collections of grasses, legumes and woody plants. Its primary task is to develop plants to help control soil erosion on cropland and to improve water quality. Plants are also developed to increase forage production, provide wildlife habitat, beautify the land and for other purposes.

The center continually strives to find the best plants for soil and water conservation.

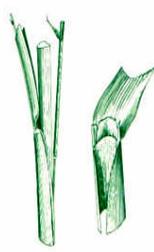

Plants for Conservation

Maintaining good ground cover is basic soil conservation. Recognizing the best plant for the intended purpose, planting it correctly and keeping it healthy is a formula for successful care of the land.

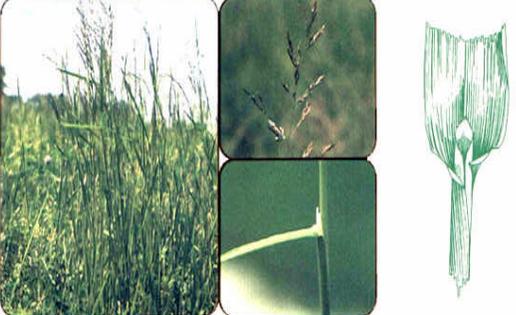

The List.....

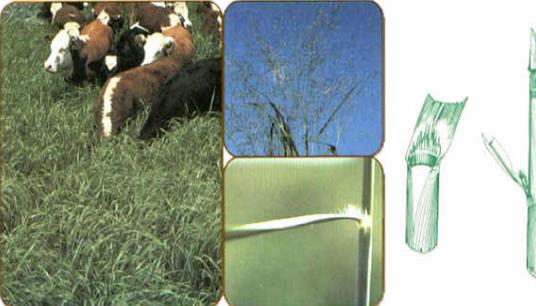

<p>Alfalfa <i>Medicago sativa</i></p> 	<p>Alfalfa -- <i>Medicago sativa</i></p> <p>About this plant: Perennial Legume Growth occurs from crowns Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Leaf:</u> Usually three leaflets with terminal leaflet on small stem; 1/3 of leaflet is toothed <u>Flower:</u> Purple</p>
<p>Alsike clover <i>Trifolium hybridum</i></p> 	<p>Alsike clover -- <i>Trifolium hybridum</i></p> <p>About this plant: Perennial short lived legume Growth from a crown with multiple stems Grows 12 to 24 inches tall</p> <p>Identification Tips: <u>Leaf:</u> Three leaflets all equal distance from petiole, no light marks present on upper leaf surface, not shiny underneath <u>Flower:</u> White to rose <u>Other:</u> No hairs on vegetative parts</p>
<p>Annual ryegrass <i>Lolium multiflorum</i></p> 	<p>Annual ryegrass -- <i>Lolium multiflorum</i></p> <p>About this plant: Annual Cool season Grows 1 to 2 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, smooth and open <u>Blade:</u> Rolled in the bud shoot, flat, 1/8-inch wide <u>Ligule:</u> Small, membranous <u>Other:</u> Small auricles present</p>
<p>Big bluestem <i>Andropogon gerardii</i></p> 	<p>Big bluestem -- <i>Andropogon gerardii</i> (native)</p> <p>About this plant: Perennial grass Warm season Spreads by short rhizomes Somewhat bunchy Grows 6 to 9 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round to somewhat flattened, open purplish at base, usually hairy <u>Blade:</u> Rolled in the bud shoot, silky hairs widely dispersed on upper leaf surface <u>Ligule:</u> Small membrane</p>

<p>Birdsfoot trefoil <i>Lotus corniculatus</i></p> 	<p>Birdsfoot trefoil -- <i>Lotus corniculatus</i></p> <p>About this plant: Perennial legume Growth occurs from crowns but roots can also produce new growth Grows 12 to 18 inches tall</p> <p>Identification Tips: <u>Leaf:</u> 5 leaflets, 3 above and 2 below <u>Flower:</u> Yellow to deep orange, tinged with red <u>Other:</u> Inch-long seed pods resemble several toes of a bird's foot, thus plant's name</p>
<p>Cereal rye <i>Secale cereale</i></p> 	<p>Cereal rye -- <i>Secale cereale</i></p> <p>About this plant: Annual cereal grain Grows 3 to 5 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, smooth, split with overlapping margins <u>Blade:</u> Rolled in the bud shoot, 1/2 to 1 inch wide, margins rough <u>Ligule:</u> Small membranous, torn on the edges <u>Other:</u> Small auricles without hairs</p>
<p>Crownvetch <i>Coronilla varia</i></p> 	<p>Crownvetch -- <i>Coronilla varia</i> *</p> <p>About this plant: Perennial legume Spreads to underground rootstocks Creeping stems grow to 3 to 5 feet tall</p> <p>Identification Tips: <u>Leaf:</u> 12 to 14 pairs of leaflets arranged along a common stem, no tendrils <u>Flower:</u> Variegated white to purple in color</p>
<p>Eastern gamagrass <i>Tripsacum dactyloides</i></p> 	<p>Eastern gamagrass -- <i>Tripsacum dactyloides</i> (native)</p> <p>About this plant: Perennial grass Forms bunches up to 4 feet in diameter with thick short jointed rhizomes Grows 6 to 8 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Flattened and open <u>Blade:</u> Rolled in bud shoot, flat, smooth, up to 1/2-inch wide, with large, prominent, light-colored midrib <u>Ligule:</u> Ring of short hairs</p>

<p>Hairy Vetch <i>Vicia villosa</i></p>  	<p>Hairy vetch -- <i>Vicia villosa</i></p> <p>About this plant: Winter annual legume Usually planted in late summer for major growth the following year Grows 3 to 4 feet and attaches to other plants by tendrils</p> <p>Identification Tips: <u>Leaf:</u> Multiple leaflets arranged along the sides of a common stem ending in a tendril <u>Flower:</u> Blue violet <u>Other:</u> Vegetative parts are covered by small hairs</p>
<p>Indiangrass <i>Sorghastrum nutans</i></p>  	<p>Indiangrass -- <i>Sorghastrum nutans</i> (native)</p> <p>About this plant: Perennial grass Warm season Strong bunch grass Grows 2 to 4 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Flattened, open, often purplish at the base <u>Blade:</u> Folded in the bud shoot, folded along the midrib, narrow (less than 1/4-inch wide) <u>Ligule:</u> Small membranous</p>
<p>Kentucky bluegrass <i>Poa pratensis</i></p>  	<p>Kentucky bluegrass -- <i>Poa pratensis</i></p> <p>About this plant: Perennial grass Cool season Sod forming Grows 1 to 2 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Somewhat flattened and open <u>Blade:</u> Folded in bud shoot, 1/8-inch wide, boat shaped tip and two white lines down center of leaf <u>Ligule:</u> Small, membranous</p>
<p>Little bluestem <i>Schizachyrium scoparium</i></p>  	<p>Little bluestem -- <i>Schizachyrium scoparium</i> (native)</p> <p>About this plant: Perennial grass Warm season Spreads by short rhizomes, somewhat bunchy Grows 3 to 6 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open, may be hairy at the base <u>Blade:</u> Rolled in the bud shoot, flat, narrowed at the base <u>Ligule:</u> Prominent, membranous, clawlike -- often referred to as a rifle sight</p>

<p>Oats <i>Avena sativa</i></p> 	<p>Oats -- <i>Avena sativa</i></p> <p>About this plant: Annual cereal grain Cool season Grows 2 to 4 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, short, hairy, split with overlapping margins <u>Blade:</u> Rolled in the bud shoot, 1/4 to 1/2 inch wide, margins short, hairy <u>Ligule:</u> Prominent, membranous, rounded and toothed <u>Other:</u> Auricles absent</p>
<p>Orchardgrass <i>Dactylis glomerata</i></p> 	<p>Orchardgrass -- <i>Dactylis glomerata</i></p> <p>About this plant: Perennial grass Cool season Bunch grass Grows 2 to 4 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Flattened and open <u>Blade:</u> Folded in bud shoot, flat, at least 1/4-inch wide <u>Ligule:</u> Large, membranous, often split at maturity</p>
<p>Perennial ryegrass <i>Lolium perenne</i></p> 	<p>Perennial ryegrass -- <i>Lolium perenne</i></p> <p>About this plant: Perennial grass (short lived) Cool season Bunch grass Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Flattened, smooth and open <u>Blade:</u> Folded in the bud shoot and V-shaped, 1/8-inch wide, smooth and glossy below <u>Ligule:</u> Small, membranous <u>Other:</u> Narrow, small auricles</p>
<p>Red clover <i>Trifolium pratense</i></p> 	<p>Red clover -- <i>Trifolium pratense</i></p> <p>About this plant: Biennial or short lived perennial legume Growth is from crow's; tufted appearance Grows 18 to 30 inches tall</p> <p>Identification Tips: <u>Leaf:</u> Three leaflets all equal distance from petiole, light colored V marks present on upper leaf surface, not shiny underneath <u>Flower:</u> Rose red color <u>Other:</u> Vegetative parts usually covered with many hairs, does not have stolons</p>

<p>Redtop <i>Agrostis alba</i></p> 	<p>Redtop -- <i>Agrostis alba</i></p> <p>About this plant: Perennial grass Cool season Sod forming Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open, shorter than internodes <u>Blade:</u> Rolled in the bud shoot, up to 1/4-inch wide, with prominent veins on the surface <u>Ligule:</u> Large, membranous and shovel shaped</p>
<p>Reed canarygrass <i>Phalaris arundinacea</i></p> 	<p>Reed canarygrass -- <i>Phalaris arundinacea</i> * (native)</p> <p>About this plant: Perennial grass Cool season Sod forming Grows 2 to 6 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open and pale below ground <u>Blade:</u> Rolled in the bud shoot, flat, up to 1/2-inch wide <u>Ligule:</u> Large membranous ligule, pointed, often described as papery <u>Other:</u> Large rhizomes, greater than 1/8-inch diameter</p>
<p>Sideoats grama <i>Bouteloua curtipendula</i></p> 	<p>Sideoats grama -- <i>Bouteloua curtipendula</i> (native)</p> <p>About this plant: Perennial grass Warm season Sod forming Grows 1 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open, longer than the internodes <u>Blade:</u> Rolled in bud shoot, flat, up to 1/8-inch wide, hairs protruding from bumps on margins <u>Ligule:</u> Small, membranous with short hairs on top</p>
<p>Smooth bromegrass <i>Bromus inermis</i></p> 	<p>Smooth bromegrass -- <i>Bromus inermis</i> *</p> <p>About this plant: Perennial grass Cool season Sod forming Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, closed near the top <u>Blade:</u> Rolled in the bud shoot, pinched 'W' in leaf blade <u>Ligule:</u> Small, membranous</p>

<p>Sweet clover <i>Melilotus sp.</i></p> 	<p>Sweet clover -- <i>Melilotus sp.</i></p> <p>About this plant: Biennial legume (some annual forms also) Growth occurs from a crown with one main stem Grows 2 to 5 feet tall</p> <p>Identification Tips: <u>Leaf:</u> Usually three leaflets with terminal leaflet on small stem; entire leaflet is toothed <u>Flower:</u> Yellow/White <u>Other:</u> White sweet clover is more coarse, taller and flowers 10 to 20 days later than yellow sweet clover</p>
<p>Switchgrass <i>Panicum virgatum</i></p> 	<p>Switchgrass -- <i>Panicum virgatum</i> (native)</p> <p>About this plant: Perennial grass Warm season Sod forming Grows 3 to 6 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open, white to purplish tinged below <u>Blade:</u> Rolled in the bud shoot, flat up to 1/2-inch wide <u>Ligule:</u> Fringe of hairs with a dense mat of hairs extending onto the upper leaf surface</p>
<p>Tall Fescue <i>Festuca arundinacea</i></p> 	<p>Tall fescue -- <i>Festuca arundinacea</i> *</p> <p>About this plant: Perennial grass Cool season Bunch grass; forms a weak sod Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open, fitting loosely around the stem <u>Blade:</u> Rolled in the bud shoot, smooth and shiny underneath, ridged on the upper surface <u>Ligule:</u> Small membranous <u>Other:</u> Very small auricles, not readily seen by the naked eye</p>
<p>Timothy <i>Phelum pratense</i></p> 	<p>Timothy -- <i>Phelum pratense</i></p> <p>About this plant: Perennial grass Cool season Bunch grass Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, open and overlapping <u>Blade:</u> Rolled in the bud shoot, flat, up to 1/4-inch wide, often twisted <u>Ligule:</u> Large, membranous, with notch at either side <u>Other:</u> Each stem grows from a distinctive swollen base</p>

<p>Wheat Triticum aestivum</p> 	<p>Wheat -- <i>Triticum aestivum</i></p> <p>About this plant: Annual cereal grain Grows 2 to 3 feet tall</p> <p>Identification Tips: <u>Sheath:</u> Round, smooth, split with overlapping margins <u>Blade:</u> Rolled in the bud shoot, 1/4 to 1/2 inch wide, margins smooth <u>Other:</u> Small auricles, mostly long, hairy</p>
<p>White Clover Trifolium repens</p> 	<p>White clover -- <i>Trifolium repens</i></p> <p>About this plant: Perennial legume Spreads by stolons Grows 6 to 12 inches tall</p> <p>Identification Tips: <u>Leaf:</u> Three leaflets all equal distance from petiole, light colored V marks present on upper leaf surface, shiny underneath <u>Flower:</u> White to pinkish white <u>Other:</u> No hairs on vegetative plant parts</p>

* indicates the plant may be considered weedy or invasive in some parts of the US and may not be appropriate for conservation uses in certain areas. Check with your local Conservation District or state department of natural resources for more information on weediness and recommendations for use. This guide is primarily intended as an identification tool. Persons intending to use these plants for conservation or landscape should consult additional sources of information for use, establishment, and management of the species.

PDF document prepared by the USDA-NRCS Plant Materials Program, Beltsville, MD.
