

Forage Brassica Field Meetings

Tuesday, July 28, 2009

7:00 PM

and

Wednesday, July 29, 2009

1:30 PM

Come to either meeting!

Extension Learning Farm, Canton

State Highway 68, 3 miles southeast of Canton, NY

At sharp curve by blinking light.

Forage brassica crops are closely related to vegetables like turnips and broccoli, but they are bred for high yields of high quality forage for grazing animals.

These crops are palatable and have high levels of digestible energy for ruminant nutrition.

Come see our research plots, learn about the performance and characteristics of different varieties and how these crops might fit into your grazing operation.

This research and field day is made possible by a grant from Northeast SARE.

Mark your calendar now for another brassica field meeting on September 18, 10am-2pm in Heuvelton!

Refreshments provided.
