Notes:

- 1) Each row / treatment is 45' in length with plants on 18" centers. There are 30 plants in each row.
- 2) Hand harvested fruits were culled in the field
- 3) Missing data is due to a lack of colored / ripe fruit. Too much fruit was removed by shaker, so some harvest dates resulted in no data on V and Incline trellis.
- 4) All yields are for marketable fruit only. This is after culling of unripe and rotten fruit.
- 5) All times include post harvest sorting to remove culls.
- 6) NR indicates no ripe fruit. Shaking removed many green fruit, so there was often no ripe fruit for several harvests.
