

Table 8: Crop yields (Mg/ha) from the Grain rotation that compares reduced herbicide (RH) and "standard" herbicide (SH) treatments.

Crop	Year	RH	SH	SE	Contrast RH
		(6 yr)	(6 yr)		vs. SH
Corn Grain	2010	10.94	10.61	0.29	0.450
	2011	8.95	8.39	0.25	0.127
Soybean Grain	2010	4.33	4.22	0.26	0.791
	2011	2.78	3.34	0.25	0.132
Forages Yr. 1	2010	6.95	8.60	0.57	0.001
	2011	4.42	3.46	0.39	0.020
Forages Yr. 2	2010	8.30	8.90	0.57	0.145
	2011	14.06	14.16	0.39	0.755
Forages Yr. 3	2010	4.58	6.16	0.40	0.001
	2011	9.44	10.35	0.39	0.026
Canola	2010	1.42	1.01	0.30	0.380
	2011	2.06	1.99	0.25	0.843

Tests of Fixed Effects

Source of Variation	df	p value

Table 9: Forage yield (Mt/ha) by harvest date for the GRAIN rotation in 2011.
Management comparison is reduced herbicide (RH) vs. "standard" herbicide. RH treatment is alfalfa, orchard grass, pea, and tritcale; the SH treatment is alfalfa alone.

Crop Entry	Harvest Date	Dry Matter Yield (Mt/ha)		
		RH	SH	(SE)
Forage Yr. 1 (cut #1)/silage	6/20/2011	1.93 a	0.26 b	0.117
Forage Yr. 1 (cut #2)/hay	8/10/2011	0.77 b	1.51 a	0.117
Forage Yr. 1 (cut #3)/silage	10/7/2011	1.72	1.69	0.117
Forage Yr. 2 (cut #1)/silage	6/3/2011	5.22	5.09	0.266
Forage Yr. 2 (cut #2)/hay	7/1/2011	2.56	2.67	0.266
Forage Yr. 2 (cut #3)/silage	8/1/2011	1.93	1.94	0.266
Forage Yr. 2 (cut #4)/silage	8/31/2011	2.74	3.32	0.266
Forage Yr. 2 (cut #5)/silage	11/3/2011	1.60	1.13	0.266
Forage Yr. 3 (cut #1)/silage	6/3/2011	5.24	5.15	0.263
Forage Yr. 3 (cut #2)/hay	7/1/2011	2.64	2.59	0.263
Forage Yr. 3 (cut #3)/silage	8/1/2011	1.56	2.61	0.263

a,b: Different lowercase letters between RH and SH for a particular variable indicate a statistical difference between main management treatments at the 0.05 level.

Table 10: Forage and feed quality analyses for the GRAIN rotation in 2011. The main management comparison in this rotation is reducing herbicide (RH) use via a variety of weed management tactics compared to a more "standard" herbicide program. In the RH rotation, forage is composed of alfalfa, orchard grass, pea, triticale, with pea and triticale permanently removed in the first cutting (year 1). In the SH rotation, forage is pure alfalfa for all three years. Standard errors (SE) are presented.

Crop Entry	Harvest Date	% Crude Protein			% Neutral Detergent Fiber			Net Energy of Lactation (Mcal/lb)		
		RH	SH	(SE)	RH	SH	(SE)	RH	SH	(SE)

a,b: Different lowercase letters between RH and SH for a particular variable indicate a statistical difference between main management treatments at the 0.05 level.

-*:- Indicates a main management difference across cuttings for a particular forage crop entry point at the 0.05 level.

^For canola, results shown are the averages from two representative samples and were not analyzed statistically.
