

Shrub Cover Statistics. A repeated measures ANOVA for shrub and sapling cover shows significant Year x Month and Month x Browse interactions suggesting effects of both browse treatments and weather.

Effect	DF	F Value	p Value
Browse	8	9.39	0.008
Year	24	39.91	<.0001
Year x Browse	24	0.51	0.6094
Month	48	19.19	<.0001
Month x Browse	48	40.49	<.0001
Year x Month	48	36.36	<.0001
Year x Month x Browse	48	2.18	0.1238

Shrub Cover Graph. Shrub cover decreased in treatment paddocks immediately following browsing rotations during both years of study but increased in control and light browse paddocks the spring following the first season of browse. Letters denote the following: (a) a significant difference from the control during the same sample period; (b) a significant difference from the corresponding treatment in June 2011; (c) a significantly different from the corresponding treatment in June 2012 ($n = 5$; $p \leq 0.05$).
