

## Figure 1. Test interpretation guidelines for the API 20 Strep system

All Negative Tests

All Positive Tests

Each individual test is marked as positive and negative, creating a test profile for each isolate.

**Figure 2. MIC cut-offs for *Streptococci***

| <b>Drug</b>           | <b>Sensitive</b> | <b>Intermediate</b> | <b>Resistant</b> |
|-----------------------|------------------|---------------------|------------------|
| Ampicillin            | $\leq 0.25$      | 0.5 - 4             | $\geq 8$         |
| Penicillin            | $\leq 0.12$      | 0.25 - 2            | $\geq 4$         |
| Erythromycin          | $\leq 0.25$      | 0.5                 | $\geq 1$         |
| Pirlimycin            | $\leq 2$         | 0                   | $\geq 4$         |
| Penicillin/Novobiocin | $\leq 1/2$       | 2/4                 | $\geq 4/8$       |
| Tetracycline          | $\leq 2$         | 4                   | $\geq 8$         |
| Cephalothin           | $\leq 8$         | 16                  | $\geq 32$        |
| Oxacillin*            | N/A              | N/A                 | N/A              |
| Ceftiofur*            | N/A              | N/A                 | N/A              |
| Sulphadimethoxine*    | N/A              | N/A                 | N/A              |
