

Table 2. This table lists all the native bees collected by pan traps inside netting enclosures on experimental apple tree branches. *Andrena crataegi* was the most numerous native bee collected by the pan traps, which indicated that it played the key role in apple pollination.

Family	Species	Number	Percent of the Collection
Andrenidae	<i>Andrena barbara</i>	2	0.013
Andrenidae	<i>Andrena carlini</i>	25	0.157
Andrenidae	<i>Andrena crataegi</i>	116	0.725
Andrenidae	<i>Andrena miserabilis</i>	1	0.006
Andrenidae	<i>Andrena violea</i>	1	0.006
Apidae	<i>Ceratina calcarata</i>	1	0.006
Halictidae	<i>Halictus species</i>	2	0.013
Halictidae	<i>Lasioglossum species</i>	12	0.075
