

Efficacy of deltamethrin-incorporated mosquito netting for control of BMSB and other agricultural pests

Figures.

Table 1. % Mortality of BMSB held on disks of Vestergaard-frandsen Permanet (deltamethrin-incorporated) screen after exposure to ambient conditions for various time periods.

	Sept 2011 (Fresh screen)	Oct 2011 (1 month)	Sept 2012 (1 year)
Untreated	0	0	5
Treated	100	95	70

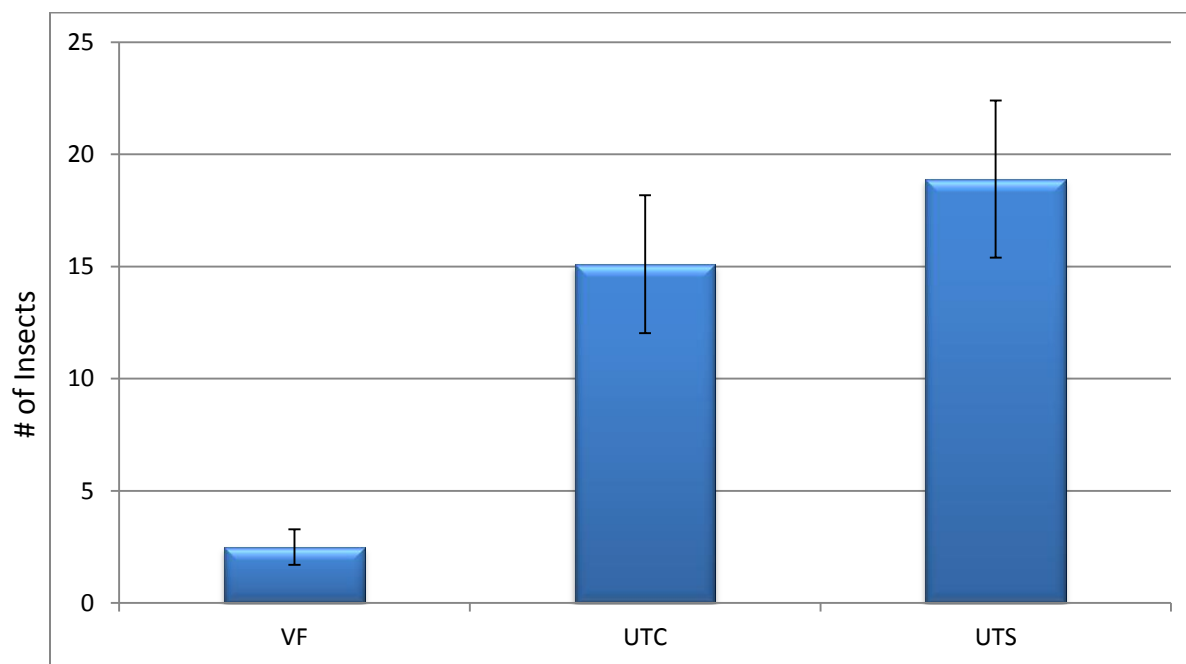

Fig. 1. Mean number of live flea beetles on five eggplant seedlings with different row cover treatments. Numbers are summed across two sample dates at 4 days in the field, June 2012, Kentland Farm.

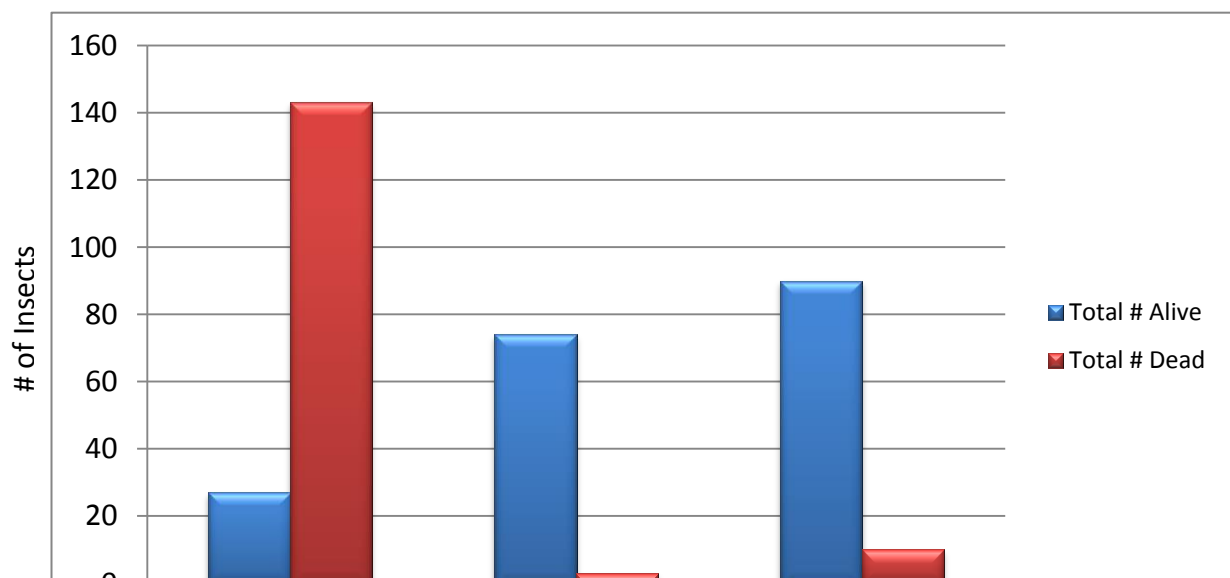

Fig. 2. Total number of live and dead cucumber beetles per four muskmelon plants with different row cover treatments. Numbers are summed across three sample dates in June and July 2012.
