Fig 5. Forage yield response (metric tons per acre) to different fertilizer treatments in (A) Controlled Flooded and (B) Controlled Dryland systems. Treatments included synthetic nitrogen (Urea), biological inoculants (Azospirillum, AMF—Arbuscular Mycorrhizal Fungi, Azospirillum + AMF), commercial organic-based fertilizer (HyperCycle high rate), and untreated Control. Differences among treatments within each system were not statistically significant (NS).
