

After 2024 winter, only branches that was buried underneath the woodchips survived. We need to bury the whole branches inside in the future

This species has vigorous growth but ripe very late. It tastes delicious. We may remove it from the high tunnel. It is labeled as no. 1

Harvest all the way until

Nov. with the high tunnel.

After frost, the leaves are dead but the figs are still good.

My friend visited from Canada. It is in the peak growing season.

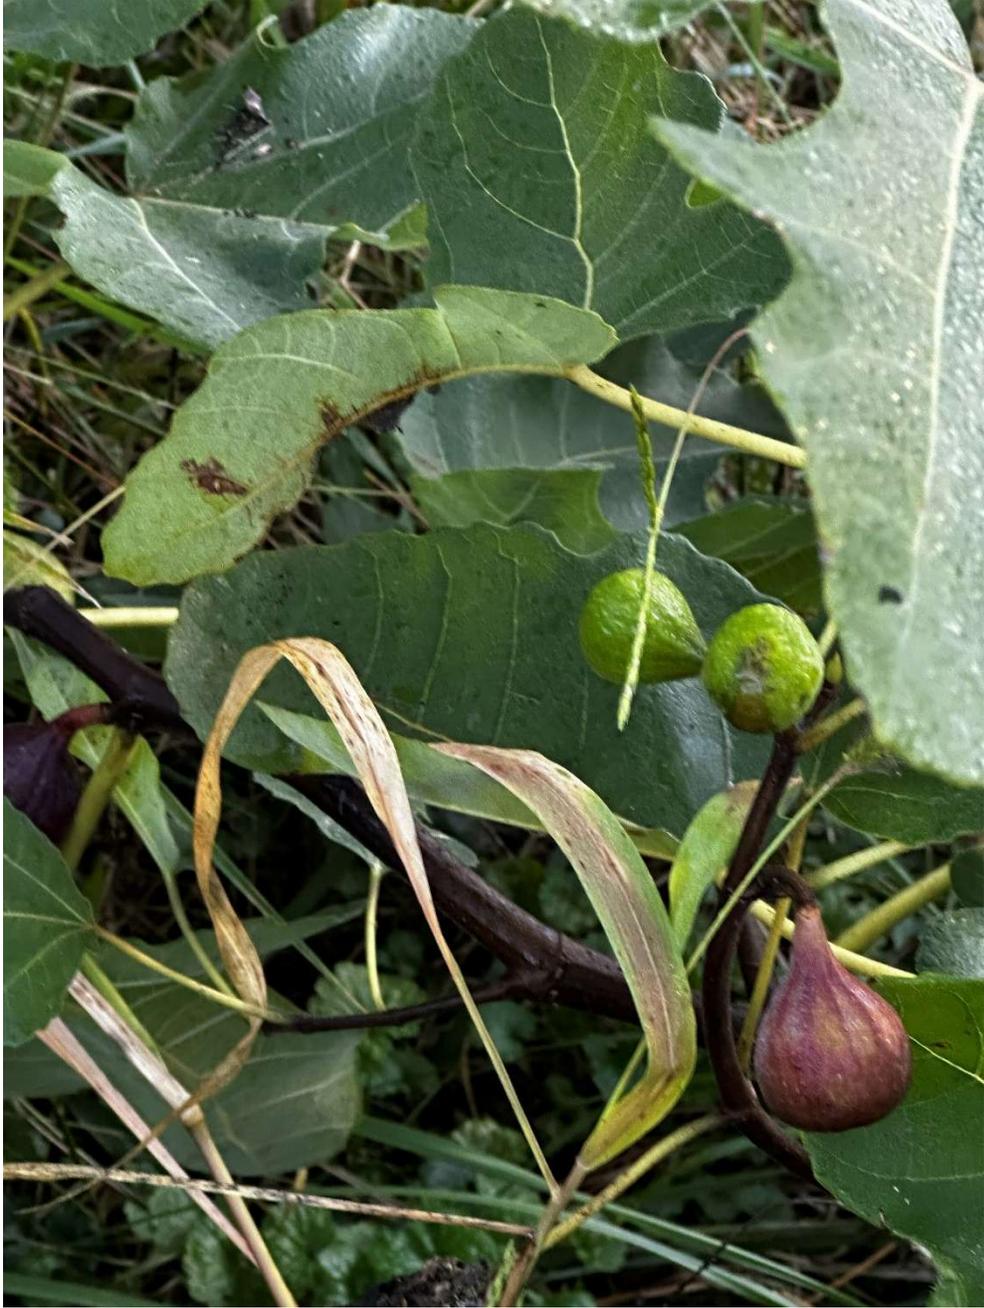

spring growth

Use sweet potato as ground cover to suppress the weeds. Weed control is a huge problem

This species when ripe has green skin, the only way you can tell is that the fig head bent down, inside it is dark purple, which you can see from the opening.

Year 1, first year growth
