

Figure 3 Clubrot index (A) and incidence (B) in mustard greens plants grown in anaerobic soil disinfestation (ASD)-treated soil amended with cover crops or wheat bran (standard) as carbon sources.

Error bars indicate standard error, P -value is the analysis of variance P -value, bars with the same letter(s) do not differ significantly at $P \leq 0.05$. Means were separated using Fisher's least significant difference test on arcsine (square-root) transformed data. Data presented are combined from two independent experiments, each with three replications.
