## TRAININGS FOR NATURAL RESOURCE PROFESSIONALS

### Silvopasture 201: Design Intensive

If you're someone who advises land managers, and you're ready to learn more about silvopasture, then this training is for you! Silvopasture is the intentional integration of forages, trees, and livestock, and can help increase the productivity and health in farm and forest systems.

The increasing interest in agroforestry among land managers has produced a growing need for technical assistance.

Join us for a deep dive where we go beyond the basics to share the latest research, technical resources, and real life silvopasture examples. Learn from experienced farmers and natural resource professionals. You'll be guided through hands on design activities to put learning into practice, and leave with a greater ability to support landowners with silvopasture technical assistance.

An online silvopasture course is available for free to all registrants. This introductory online course OR participation in the Silvopasture Fundamentals training held last year is a required prerequisite to help prepare you for this more advanced training.

If you need an assistive device, service, or other accommodations, please contact Katie Trozzo (ketrozzo@vt.edu) at least 5 days prior to the event.

This event will occur rain or shine. Seats are limited, so register soon!
