

Description of the paddocks for pastures McAfee

Paddocks

This chart shows the paddock locations for this project. It's color-coded and numbered, **A1 – A7, B1 – B5, C1 – C7**. Additionally there are four plots set aside for growing plant species that attract pollinators. These are permanently fenced and will not be grazed. These are in A1, A7, B4, and C1, comprising approximately 130 acres.

Water pipelines

There are two pipelines shown on this chart. These will be used for providing water to cattle.

One is laid out in an east-west direction along County Road Z and within Paddocks A2, B1, B2, and B3. This line will provide water for cattle when they are grazing in these paddocks. This is a component of the Grasslands CRP and will be partially financed by that contract. The balance will be financed by WSARE funds and by Producers McAfee.

Another pipeline is in Paddock A3. This is an extension of an EQIP project, completed in 2017, for the purpose of providing wetland habitat for sharp tailed grouse. There is an existing lek in B1 and grouse have been observed to the west of the lek, in A2 and A3. This line will be financed by the Grasslands CRP, the WSARE funding, and Producers McAfee.
