## Provide Your Feedback on Precision Ag

Updated: 6 days ago

Palouse Conservation District is developing technical assistance programs to help producers evaluate and adopt precision agricultural practices. If you are a producer or a professional who works with producers (such as a crop consultant, extension educator, researcher, or agency representative), we want to better understand how we can best serve or partner with you.

What are your needs and interests related to applying fertilizer and soil amendments, sap testing, using drones, or other precision nutrient management strategies? Please tell us by taking 5-10 minutes to answer these questions. Your input is important! The survey will close on Monday, December 15th, 2025.

Palouse Conservation District is developing new technical assistance programs to help producers explore and adopt precision agriculture practices, and we want to hear from you! Whether you're a producer, crop consultant, extension educator, researcher, or agency professional, your input will help shape future support and resources.

Tell us about your needs and interests related to fertilizer use, soil amendments, sap testing, drone technology, and other precision nutrient management tools.

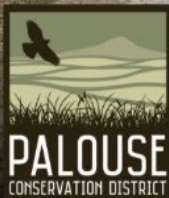

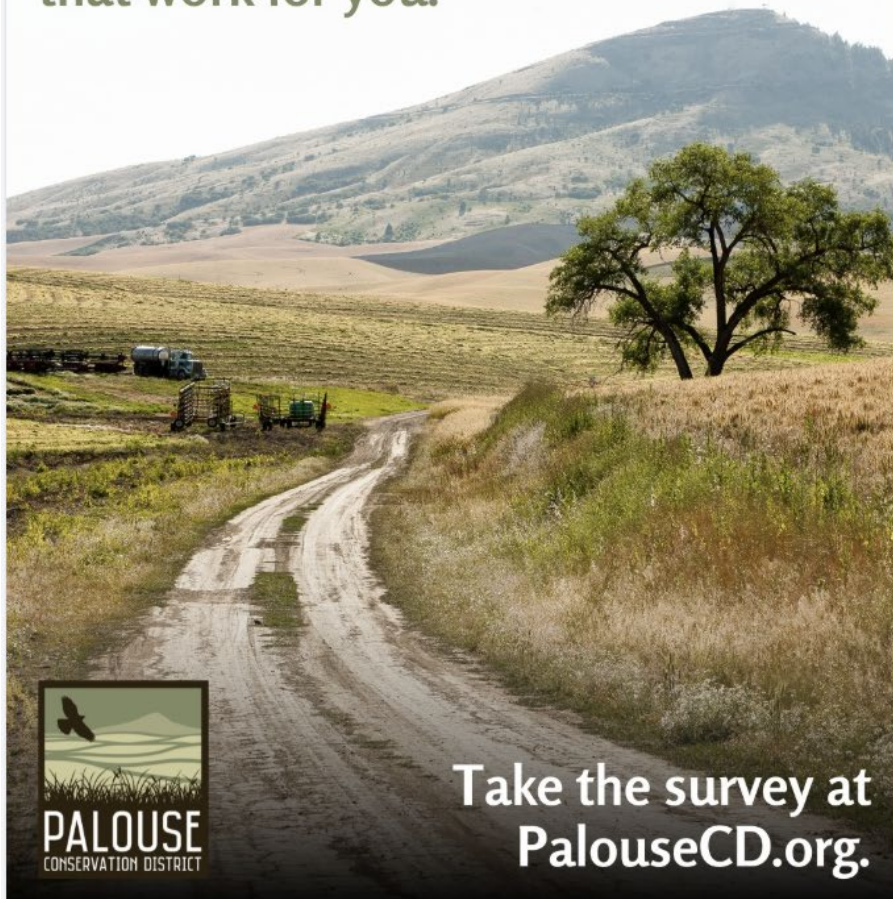

The survey takes just 5–10 minutes and closes on Monday, December 15th.

Your feedback will guide how we can best serve and partner with you.

### **Soil Health Breakfast**

***Wednesday, December 10th from 8 am - 10 am | Colfax, WA***

Enjoy coffee and breakfast as you learn about the soil health practices that your fellow producers are implementing on their operations. Guest speaker Ariel Zakarison will highlight strategies she's applying to enhance soil health at Zakarison Farms.

[Register by December 7th here.](#)

### **Conservation Talk Series | Understanding and Managing Noxious Weeds**

***Thursday, December 11th at 6 pm via Zoom***

This presentation will explore the most common local noxious and invasive plant species—what they look like, why they're a problem, and the steps we can take as a community to reduce their spread. Participants will gain insight into how noxious weeds impact native biodiversity, local agriculture, and the landscapes we enjoy every day. You'll also learn about simple, effective strategies for weed mitigation that help protect healthy habitats and support the long-term resilience of our region's natural ecosystems.
