

Figure 2 Effect of *trans*-cinnamaldehyde (TC) at 0.4, 0.8, and 1.0% on *Aspergillus flavus* NRRL 3357 and *Aspergillus parasiticus* NRRL 4123 growth and aflatoxin production in poultry feed. Data are the mean \pm SEM obtained from 3 separate experiments with duplicate samples on each sampling time point (0, 1, 2, 3, 4, 8, 12 week). Error bar indicates SEM (n=6/treatment). Fig. 2A and 2B show the growth of *A. flavus* and *A. parasiticus*, respectively, whereas Fig. 2C and 2D show AF production by the molds.
