

Tilmor power ox 240 user checklist:

Before use:

- Check oil and gas levels
- Adjust handles up or down as needed (G)

Ready to use:

- Hook up desired implement to receiver hitch (H)
- Put kickstand up
- Move fuel shutoff lever to the on position (D)
- Engage choke (move choke level to closed position) (C) if starting the engine for first time or it's cold. If the engine is already warm, the choke should remain open when starting
- Move throttle about 1/3 of the way up to the max position (B)
- Turn engine on (F)
- Pull starter cord (E)
- Once the engine is running and begins to make a sputtering noise, turn choke to open position

For more information view the power ox user manual

Stopping the engine:

- Move throttle to the lowest speed position (B)
- Turn the engine off (F)
- Turn fuel valve lever to off position (D)
