Tissue Testing: Questions
How effective is a foliar application? Can you get test results in a timely manner?

Are there any other sources for updated and/or region-specific sufficiency ranges/actionable recommendations based on tissue testing - based on new varieties/updated management systems, etc. And do they exist for other rotational crops (peas, garbs, canola, etc)

Questions: Sap Testing

How does it correlate with traditional tissue testing. What other advantages does it offer? Has there been enough data collected that we know the recommendations provide the desired outcomes?

Goal from Tour

Differences in observed yield using tissue vs sap analysis to guide fertilizer application

Just wanting to learn

Similar to above: Has there been enough data collected that we know the recommendations from sap testing provide the desired outcomes, in an economical way to be able to be accessed by growers.
