

Figure 20. Canola Stand counts in 2015 and 2016 in the Pest rotation. RH plots were tilled prior to canola planting, SH plots were planted without tillage. * indicates significant difference at $P \leq 0.01$

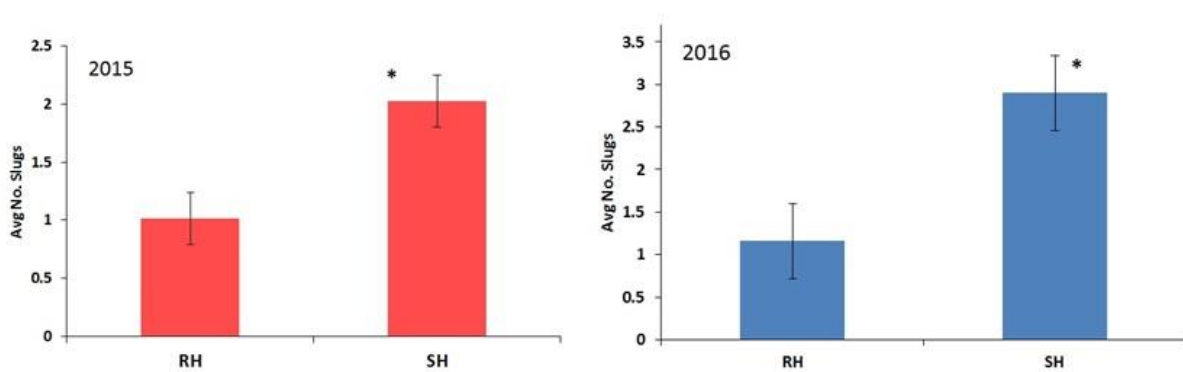

Figure 21. Slug activity density in canola crop entry averaged over (X date to X date, in 2015 and 2016) in the Pest rotation. * indicates significant difference at $P \leq 0.01$. RH plots were tilled prior to canola planting, SH plots were planted without tillage.

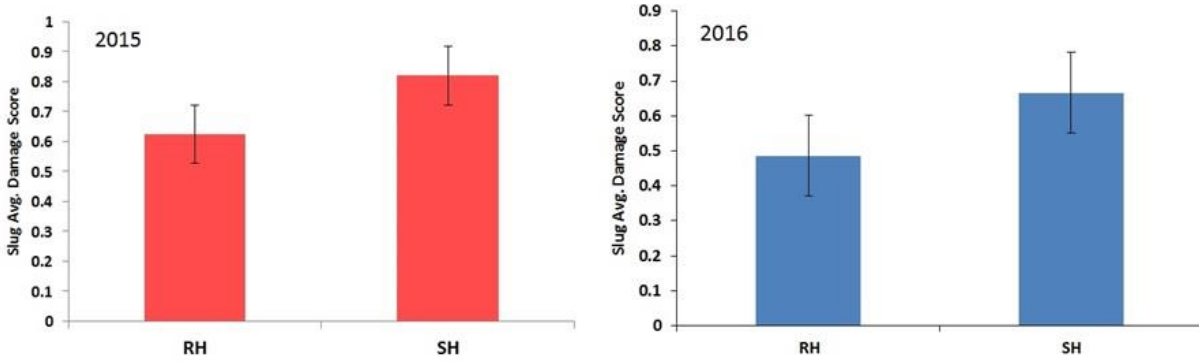

Figure 22. Slug damage assessment in canola crop entry (2015 and 2016) in the Pest rotation 40 days after planting. RH plots were tilled prior to canola planting, SH plots were planted without tillage.
