

Table 2. Relative yield (%) at the five targeted growth stages (Zadoks, Feekes) in 2014 and 2015. Yield loss or gain is relative to the yield at flag leaf stage (Zadoks 39, Feekes 9) at each site.<sup>a</sup>

Year	Species	Relative yield				
		Zadoks				
		32	37	39	45	59
Feekes						
7	8	9	10	10.5		
(%)						
2014	Cereal rye	55	90	100	130	168
	Triticale	65	90	100	129	191
	Wheat	39	53	100	119	150
2015	Cereal rye	— <sup>b</sup>	79	100	143	186
	Triticale	69	72	100	117	139

<sup>a</sup> Yield percent change is relative to flag leaf stage (Zadoks 39, Feekes 9) because it is commonly recommended to harvest winter cereals at this stage for high forage quality.

<sup>b</sup> The dash (—) indicates that cereal rye was not sampled at Zadoks 32 (Feekes 7) in 2015.
