Percent Leaf Surface Covered By:

Sample Number	Unique ID	Plant Assayed	Bacteria		Fungi		Total Coverage	Comments
				St. Dev.		St. Dev.		
01-117056	A12	Apple	45	35.9	18	26.1	63%	Adequate Coverage

St. Dev means standard deviation of the separate measurements made per the three to five leaves sent in the sample

We have found that a minimum of 60 to 80% coverage (sum of both bacterial and fungal coverage, if at least 5% is fungal coverage) can prevent disease significantly.

Notes:

75% of bacteria observed on upper surface of leaf. Fungi observed more uniformly on upper surface of leaf.
