Effect of canopy volume on light interception

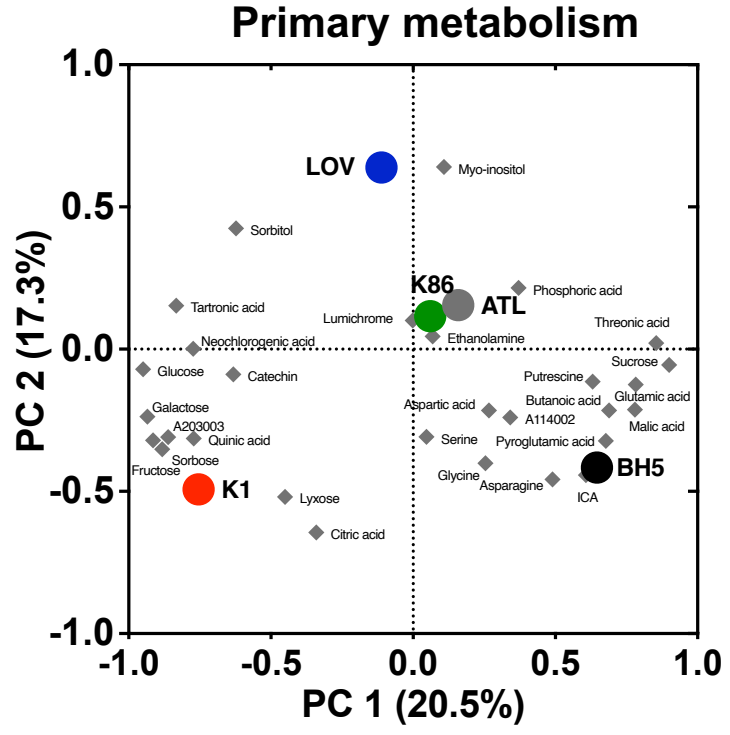

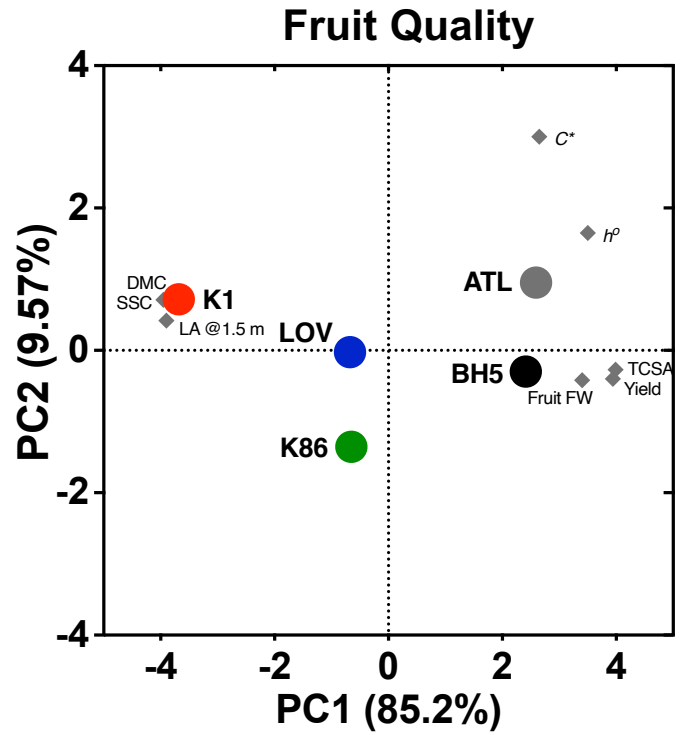

Small trees are more efficient!

- More well illuminated portion of the canopy
- More fruiting wood
- Fruits closer to main permanent structure

Rootstock influence on 'Redhaven' peach tree vigor, light availability, internal fruit quality & primary metabolism (@equal maturity & crop load)

2017 NC-140 Cresthaven Semi-Dwarf Peach Rootstock Trial

Sites: AL, CO, GA, MI, NC, NY, ONT, PA, SC, UT

Coordinator: Ioannis Minas (Colorado State University)

Cultivar: 'Cresthaven'

Training system: KAC-V

Spacing: 1.8 x 4.5 m (6 x 15 feet)

Trees/ha: 1196 (/acre: 484)

Rootstock	Breeder, Country	Genetic origin
Controller™ 6 (HBOK 27)	UC Davis, USA	peach x peach hybrid (<i>Prunus persica</i> x <i>P. persica</i>)
Controller™ 7 (HBOK 32)	UC Davis, USA	peach x peach hybrid (<i>P. persica</i> x <i>P. persica</i>)
Controller™ 8 (HBOK 10)	UC Davis, USA	peach x peach hybrid (<i>P. persica</i> x <i>P. persica</i>)
MP-29	USDA-Georgia, USA	plum x peach interspecific hyb. (<i>P. umbellata</i> x <i>P. persica</i>)
Rootpac® 40 (Nanopac)	Agromillora Iberia, Spain	almond x peach interspecific hyb. [(<i>P. dulcis</i> x <i>P. persica</i>) x (<i>P. dulcis</i> x <i>P. persica</i>)]
Rootpac® 20 (Densipac)	Agromillora Iberia, Spain	plum x peach interspecific hybrid (<i>P. besseyi</i> x <i>P. persica</i>)
Guardian®	Clemson/USDA, USA	peach seedling (<i>P. persica</i>)
Lovell	G.W. Thissell, USA	peach seedling (<i>P. persica</i>)

2017 NC-140 Semi-Dwarf Cresthaven Peach Rootstock Trial

SUSTAINABLE PEACH ORCHARD SOIL MICROBIOME MANAGEMENT TO CONTROL REPLANT DISEASE

Western SARE Research and Education

A research-extension-producer team approach to identify peach RD etiology, evaluate alternative sustainable strategies of management and impact farmer decision.

OBJ 3 EDUCATION & OUTREACH

Materials: scientific articles, factsheets, videos & website

Dissemination: locally, regionally, nationally & globally

Activities: grower meetings, seasonal workshops, field days, webinars & on-farm trial tours

ROOTSTOCKS

TREATMENTS:

Peach rootstocks: 7 *Prunus* hybrids ✓

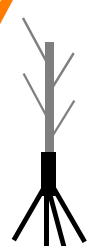

Soil types: replant & sterilized ✓

DATA COLLECTION:

Peach rootstocks growth ✓

Rhizosphere soil microbiome profiling ✓

OBJ 2

ON-FARM (CO)

PGPRs & COVER/ROTATION CROPS

TREATMENTS:

Cover crops: alfalfa & fescue

Rotation crops: corn & tomato

Soil types: replant & sterilized

DATA COLLECTION:

Susceptible peach seedlings growth ✓

Rhizosphere soil microbiome profiling ✓

2022 Peach Replant Rootstock x Training Plan

3 training systems:

- SSA - 1 leader (3 ft)
- Bi-axe - 2 leaders (6 ft)
- Quad-axe - 4 leaders (12 ft)

3 rootstocks

- Trio 2507 (1 leader or 2 leaders)
- Trio 2207 (1 leader or 2 leaders)
- Krymsk[®] 86 (2 or 4 leaders)

Scion: 'Cresthaven'

Conclusions

- Results from this study are preliminary and only focusing on establishment of the trial across 10 sites in North America
- Past NC-140 peach rootstock trials have shown rootstock productivity and performance can be safely judged after at least three bearing years
- So far 'Controller™6' seems to be a promising semi-dwarfing rootstock, and 'MP-29' has the potential to make an interesting dwarfing rootstock
- More confident conclusions on the performance of the rootstocks under evaluation in this trial can only be made with the collection of additional data in subsequent growing seasons.
