

Summer Crop Identification Worksheet

Can you find and identify these plants?

Working in partners or small groups, explore the raised beds around Fresh Starts and identify some common MO crops. See how many you can locate and name before we share our findings! When you visit the plants, review the hints that we've shared and take notes on the visual clues that will help you identify the crop in future. See if you can spot companion plants!

Plant Family: Solanaceae ("Nightshade")

(1) Name:

Visual Characteristics:

Companion plants?
