## APPENDIX A.1

**Table 1.** Location, acres in production, markets and European corn borer (ECB) and corn earworm (CEW) pest pressure for each farm included in the on-farm study in Objective 1.

Farm	State	Acres of Vegetables	Acres of Corn	Markets	ECB- Yearly Average Flight / Night			CEW- Yearly Average Flight / Night		
					1999	2000	2001	1999	2000	2001
Applefield	Central MA	30	6	Farmstand	1.9	6.5	4.7	20.6	4.5	1.9
Brookfield	Western MA CT River Valley	18	4	CSA	2.6	3.0	2.6	3.2	3.2	0.6
Coolwater	Western MA CT River Valley	38	4.5	Wholesale	6.6	10.5	NA	1.0	0.2	NA
Goranson	Maine	36	2	Wholesale	1.5	0.8	2.4	8.5	5.5	0.7
Kestrel	Southern VT CT River Valley	50	12	Wholesale Farmstand	5.9	15.7	15.4	2.0	0.7	0.2
The Upper Forty	Central CT CT River Valley	22	1	Farmstand Farmer's Markets	1.3	1.2	1.8	2.2	0.9	0.5
Walker	Southern VT CT River Valley	30	10	Farmstand	1.6	7.6	5.0	2.7	0.9	0.3
Wishing Stone	Rhode Island	16	2.5	Wholesale Farmstand CSA	3.8	5.8	4.5	14	12.8	8.3

**Table 2.** Mean total number of corn earworm (CEW), level of tip damage, total number of European corn borers (ECB), side and found on each treatment day compared to untreated ears for ten treatment days in 2000 and 2001.

Day of application	CEW per ear		ECB per ear		Tip damage per ear		Side damage per ear		Husk damage per ear	
	2000 <sup>z</sup>	2001	2000	2001	2000	2001	2000	2001	2000	2001

<sup>z</sup>n=100 (Early and late plantings are combined.).

<sup>y</sup>\*Indicates significance at P < 0.05 for a two-tailed Dunnett's test comparing each treatment day (day 3 - day 11) to Day 0 (no oil applied).

<sup>x</sup>n=1000. Mean across all days (including day 0) for each year.

<sup>w</sup>Day 0 is not included in the regression analysis.

**Table 3.** The percent of unfilled kernels at the tip (cone tip) found per ear for the ten treatment levels, averaged over

both planting dates in 2000 and 2001 and for each planting date (early and late) in both years.

	Percent cone tip (%)					
	2000 <sup>z</sup>	2001	2000		2001

<sup>z</sup>All ears showed some physiological abnormality at the tip in 2000, which we believe was due to cold, wet conditions during silking.

<sup>y</sup>NS, \*, \*\*Non-significant or significant by F-test at P = 0.05 or 0.01, respectively. All other interactions not shown did not pertain to this test. Mean separation by Duncan's multiple range test at P ≤ 0.05.
