Levels not connected by same letter are significantly different.

Figure 19. Effect of low moisture supplement as attractant to control medusahead patches. Inside/outside refers to position of measurement relative to exclosure. Least square means followed by a common letter do not differ significantly on the basis of Tukey's test with $\alpha=0.05$. Year1Pre: prior to application of supplement in first year of grazing; Year1Post: end of first grazing season with supplement; Year2 Post: end of season after second year of treatment.
