Lab number	Number of samples	Crop	Requested assays
310808	18	Into garlic	<i>Sclerotium cepivorum</i> <i>population</i>

Comments on results: We used the wet sieving technique to assay *Sclerotium cepivorum* from the soil.

Table 1 Sclerotia of *Sclerotium cepivorum* per 500 milliliters of soil.

Sample Section	<i>Sclerotium cepivorum</i> per 500 milliliters of soil	Germination (%) ^a
1. C1 - 1	8 ^b	50
2. C1 - 2	1	100
3. C1 - 3	2	100
4. C3 - 1	4	50
5. C3 - 2	7	43
6. C3 - 3	0 [red]	-
7. C6 - 1	1	0
8. C6 - 2	4	100
9. C6 - 3	0 [red]	-
10. C7 - 1	0 [red]	-
11. C7 - 2	3	33
12. C7 - 3	0 [red]	-
13. D14 - 1	2	50
14. D14 - 2	1	100
15. D14 - 3	10	40
16. D15 - 1	0 [red]	-
17. D15 - 2	4	50
18. D15 - 3	0 [red]	-

^a Sclerotia were germinated by sterilizing and placing on water agar.

^b A population greater than 1 sclerotia/ 500 milliliters soil is likely to result in 40-50% loss of garlic plants.
