

A. 2012 corn yield

B. 2013 corn yield

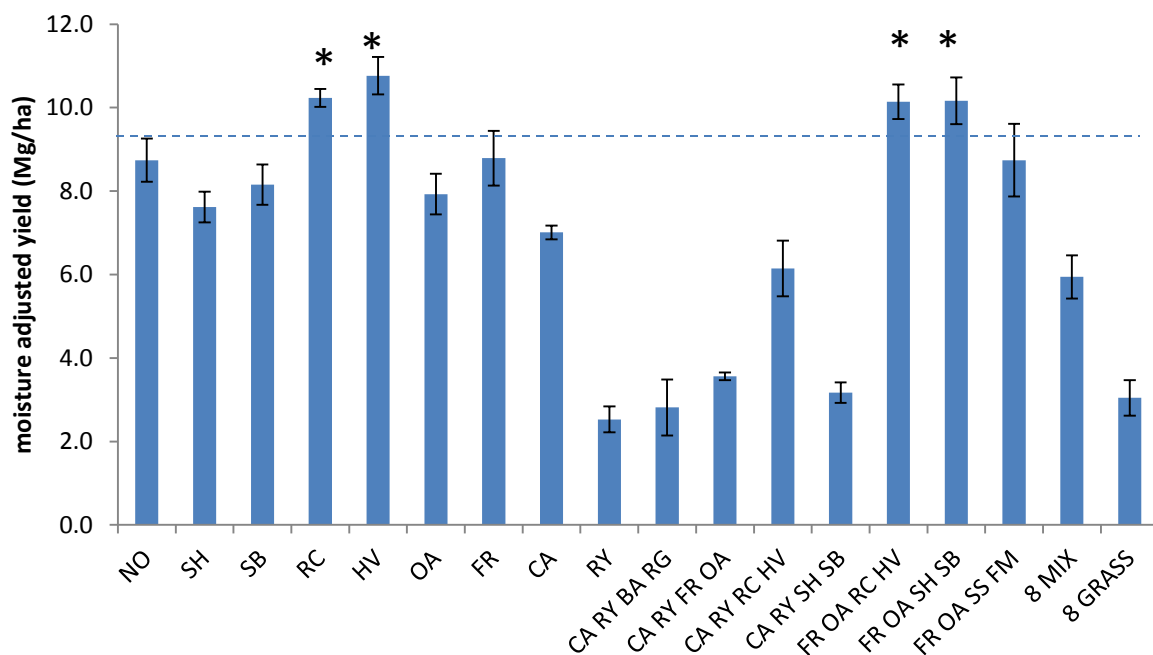

Figure 6. Corn yield without additional N application in year 1 (A) and year 2 (B). Treatments with an asterisk (*) produced significantly higher yields than the no cover crop control within the same year based on Tukey's HSD at $p=0.05$. Dashed lines approximate Pennsylvania average yield (2012=8.3 Mg/ha; 2013=9.2 Mg/ha).
