

Figure 15. Average marketable sweet corn yield at nine site*year combinations (site year), all with small grain cover crops (SW, KBS in 2013 was rye; Z7 in 2013 was wheat; the remainder had oats). Error bars show plus one SE. Data are averaged over tillage type since tillage did not affect yield (see Haramoto 2014 for details), with the exception of SW2013 for which there was marginally significant (P=0.078) improvement in yield under ST (see Fig. 2)
