Classifying Workers on Maine Farms

Getting Started

**Classification: Facts, Not Titles, Matter**

Farmers often ask: What’s really the difference between an employee and an intern or volunteer under the law? And, what is an independent contractor? How do I know what type of worker I have, legally speaking?

The first thing to know is job titles don’t matter; calling someone an independent contractor doesn’t make them one, necessarily. The substance of the worker’s tasks are what matters: How are tasks assigned? What does the worker expect in return? Who controls the worker’s time? These and many other questions determine the legal classification of the position. **There are four main classifications of workers: (1) a volunteer, (2) an independent contractor, (3) a non-employee intern, and (4) an employee.**

The legal classification of farm workers has many implications—whether the farmer must pay minimum wage, carry workers’ compensation, withhold and pay taxes, and so on. Oftentimes, what farmers call interns, volunteers, independent contractors, and so on are in fact “employees” in the eyes of the law. Misclassification is common in many industries, including farming. If a worker is in fact an employee and the farmer doesn’t properly classify them as such, the farmer risks having to pay back wages, taxes, and even penalties.

The good news is that farmers can be proactive. By learning the factors that the law takes into consideration, farmers can craft their worker arrangements to both suit their needs and fulfill their legal obligations. It’s helpful to keep in mind that employment law shares the farmer’s goal of treating their workers well. Employment law ultimately serves to protect workers—all workers—to ensure fairness, and prevent coercion and exploitation in the workplace. To facilitate this goal, the law will assume that anyone doing work for the farm business is an employee. **The farmer may classify a worker as something else if, and only if, the specific criteria for another classification are met.**

**Using This Guide**

This guide helps farmers better understand the legal definitions and criteria for classifying their workers. The first step is to walk through the summary flowchart that follows. The flowchart will lead the farmer to an initial determination...
of which of the four categories their worker(s) fall into. Note that if you have more than one person working on the farm, you may need to walk through the flowchart for each worker as the classification could be different. The sections that follow provide detailed explanations and criteria for each of the classifications.

The various categories and criteria may feel overly nuanced or abstract at first. To help ground this all in reality, we’ll be following the stories of Amanda and Ralph throughout the guide.

Farmer Amanda is a beginning farmer. She has a small CSA and is looking into labor issues, including whether she can rely on some of her CSA members to do some of the farm work and help out with packing and such. She’s ultimately looking to grow and expand her business, and hopefully start selling at farmers’ markets and even restaurants to diversify and better improve profits.

Farmer Ralph is also a beginning farmer. He sells his products mostly at farmers’ markets and to local upscale restaurants. He’s a retired math professor, and doesn’t depend at all on the farm’s income for his livelihood. It’s really just a hobby. Ralph’s main priority is to teach new farmers the ropes and pass on his legacy in this way. He loves teaching and really wants to help and train young farmers so they can go out and start their own farm businesses.

Other sections of this guide are referred to throughout that provide more detail on specific legal issues. Be sure to read all of this 3-part series on Maine employment law.

Details: What Do the Classifications Mean?

Volunteers

**Legal definition**

What is a volunteer? The law defines a volunteer as someone who performs service for charitable or humanitarian reasons for a nonprofit or public agency without expecting compensation.

**Does your farm meet the six criteria for a volunteer?**

Folks are often willing to work on farms for “free.” Some want job training, others simply appreciate the opportunity to be out in nature and see where their food comes from. Is this okay? Yes, so long as the farm meets certain criteria. Both the US Department of Labor Wage and Hour Division (US DOL) and the State of Maine Department of Labor (ME DOL) consider the following six factors when determining whether someone is a true volunteer.

1. **The farm must be operating as a nonprofit organization**

   Legally speaking, a for-profit business cannot have a volunteer. The law defines employing someone as permitting someone to work for the business. The fact that the worker isn’t paid is not relevant—the farm is being helped and the farm owner is permitting the work. That means the worker is an employee (unless they are an intern or independent contractor). The federal definition of a volunteer is someone who is motivated by charitable or humanitarian reasons for a public agency with no expectation of receiving compensation for her services. So, volunteering for a for-profit business just doesn’t work under the dominant legal paradigm.

   The reasoning behind this is, again, about preventing exploitation and coercion of workers. If a business could “persuade” employees to volunteer without any legal repercussions, the resulting economic and power dynamic would easily create unjust situations. A notion of fairness is also at play; if the business is operating to make money, workers deserve compensation for their labors.

   For more details, read Section 2, Managing Risks of Interns and Volunteers in Maine.

2. **The volunteer must work less than full time**

   This factor protects the workers from coercion and exploitation. If a volunteer
works full time for a nonprofit farm, they may become dependent on the farm for their livelihood. Let’s say the nonprofit farm has “volunteers” that work full time and the farm provides them room, board, and essentially all they need for their livelihood. This puts these workers in a potentially exploitative situation. The workers may feel pressured to do everything the farmer says to protect their living arrangement, even if unfair working conditions prevail. This is precisely the type of arrangement that employment laws protect. Nonprofit farms should be careful not to create such a dependency relationship. The best way to do this is to have the volunteers work only part time. This provides them opportunities to create a livelihood outside of the farm.

3. **The volunteer must offer the services freely, without pressure or coercion**

The volunteer needs to have some level of autonomy. As the name depicts, a volunteer must “voluntarily” agree to the tasks at hand. While the farmer can provide instruction and direction, the farmer cannot force a volunteer to do arduous or repulsive tasks such as shovel horse manure for hours on end—unless, of course, the volunteer freely volunteers to do it!

In addition, the non-profit farm cannot force a regular employee to perform volunteer services for free. Forcing an employee to volunteer is by no means volunteering! With that said, the farm can have a one-off event, such as a weekend fundraiser, and open up volunteer opportunities to regular employees. However, the farmer cannot require employees to participate or make it in any way a condition of continued employment.

4. **The volunteer must not receive or expect to receive compensation from the nonprofit farm**

This gets to the heart of the legal definition of a volunteer—someone who does not expect compensation for the services offered. If the worker expects compensation in return, they are not a volunteer. This brings up a couple of key points.

First, farmers who provide some compensation to volunteers—whether in the form of cash or in-kind payments—should tread cautiously. By compensating volunteers, the farmer risks making it look more like an employee arrangement. The “volunteer” begins to expect this compensation. Farmers in Maine who are required to pay minimum wage to their employees should strongly consider ratcheting up any compensation provided to volunteers to at least the minimum
wage amount. Otherwise, they may be better off not compensating volunteers, as it will look less like an employment arrangement. In Maine, farms must pay at least the federal minimum wage to agricultural workers if the farm has 500 or more man-days. Farms must pay the higher Maine minimum wage to workers who perform non-agricultural tasks. (See the Hiring a Farm Employee in Maine: Tax and Paperwork Checklist chapter for more details.)

In addition, as mentioned earlier, a non-profit farm cannot suddenly require a regular employee to do the work they regularly do for free. For example, let’s say the farm is running low on cash. The farmer can’t ask the employee to work for free for a couple weeks to get the farm through a tough time. The law sees this as unfair to the employee who expects compensation for their work. The farm will need to figure out another way to make payroll.

5. **The nonprofit farm cannot leverage its unpaid volunteers to unfairly compete with other farms**

In addition to protecting the workers, the law is also interested in protecting overall fairness in the marketplace. Non-profit farms gain a bit of an advantage over for-profit farms given they don’t have to pay their volunteers. They can, in turn, undercut their prices. This runs counter to how the free market system is supposed to work, so the law does not allow this! If a non-profit farm is using its volunteer base to get an upper hand at the market, the law may step in and say that the volunteers must be treated and paid as employees. What can the non-profit farm do to prevent this? First, the non-profit farm should be sure that the tasks assigned to volunteers are typical of volunteer tasks. Basically, they should be more tangential than essential to the farm’s core operations. While the volunteer base can offer a significant help to the non-profit farm, the volunteers should not be running or even playing a critical role in the operation. In addition, the farm should be sure to charge the going market rate for its products.

6. **The volunteer’s work must be informal**

This factor goes hand-in-hand with the previous factor. The volunteer’s work should be informal. This means that if the volunteer doesn’t show up, the farm’s regular operations won’t be significantly affected. In other words, the volunteers should not be fulfilling essential duties of the organization that would otherwise be done by paid employees. One way the law gauges this factor is to see if regular employees are being displaced by volunteers. If they are, it’s looking more like an
employee. To be on the safe side, the nonprofit farm should continually ask itself whether volunteers are displacing their employees. In addition, if the volunteer is being told to come in at a specific time for a specific duration on a specific day, the law will most likely see this as an employee. Farmers should extend flexibility and forgiveness to volunteers and not become overly dependent on them.

**Now What?**

*“This is terrific! I already looked into setting my farm up as a nonprofit with my mission to train the next generation of sustainable farmers! What now?”*

Farmers like Ralph who have a non-profit farm and feel they meet these criteria should review Section 2, Managing Risks of Interns and Volunteers in Maine for more information on the legal aspects of hosting volunteers.

**Farms that don’t meet the volunteer criteria.**

*“Okay, clearly I cannot have unpaid volunteers as I am operating my farm as a for-profit. So what does this mean?”*

Farmers like Amanda will most likely need to treat their workers as employees. First, however, they can review the criteria in the next two sections for independent contractors and interns to see if they might qualify.

**Independent Contractors**

**Legal Definition:**

What is an independent contractor? The law defines an independent contractor as someone who performs a specific service for another while having control over precisely how the work is done.

**Does your farm meet the six criteria for an independent contractor?**

Farmers may be asking, what are the benefits of classifying workers as independent contractors? The main benefit in Maine is that the farm isn’t required to pay minimum wage, get workers’ compensation coverage, or pay payroll taxes for independent contractors; whereas it may have to for employees
INDEPENDENT CONTRACTORS

(depending on available exemptions). When farm budgets are tight, the flexibility that independent contractors allow can seem attractive. However, if the farm misclassifies a worker as an independent contractor, it potentially faces penalties and fines at both the state and federal level. Misclassification of independent contractors has become a heated issue in the past several years. Farmers must be particularly cautious that they are following the legal criteria for independent contractors if they choose to have independent contractors.

In Maine a worker is considered an employee until proven otherwise. The ME DOL has set forth a seven step process for determining whether a worker is an employee or an independent contractor. The criteria within this process mirror the factors considered by the US DOL and the IRS.

Before getting into the details of the legal criteria, it’s helpful to start with a “perfect” example of an independent contractor—a plumber. The plumber comes to your house, brings her own tools, and her skills and expertise to determine what needs to be done to reach your goal of fixing your pipes. She doesn’t take orders from you. Also, she likely has other clients, and has business skills to build her plumbing business. You hire her for a specific project, and while you may call her back when things break, you don’t have a permanent or ongoing relationship. This is a true independent contractor. With this in mind, let’s turn to the criteria, provided as a series of questions..

Question 1: Is the worker free from direction or control of the employer?

A worker is more likely to be an independent contractor if the farmer provides little to no instruction to the worker for how the task gets done and simply cares about the end result. In other words, the employer may set the goal or overall objective, but typically the independent contractor sets tasks and controls implementation to meet the broader objective. That’s because the law assumes that independent contractors are already skilled at the services they provide. They know best how to do the work. If the farmer trains or instructs the worker on the specifics for how to pull weeds or how to transplant tomatoes, it’s likely an employee. Another aspect of this factor is that the independent contractor typically conducts tangential tasks and not the core or day-to-day tasks of the farm operation. For example, core tasks like harvesting crops on a daily basis would not be appropriate for an independent contractor. However, a farmer may
INDEPENDENT CONTRACTORS

hire an independent contractor to install or fix the irrigation system or build an equipment shed, as these are more one-off projects.

If the answer to this question is yes, move to question 2.

If the answer to this question no, the worker is an employee.

Question 2: Does the worker have the essential right to control the means and progress of the work except as to final results?

The independent contractor is ultimately responsible for the satisfactory completion of the work. The farmer can set a deadline or a time when the project needs to be completed and then hold them legally or contractually responsible if they fail to complete the work. The farmer can also specify a range of hours such as a maximum number of hours they can work. The independent contractor is typically not working full time and they set their own schedule. If you’re telling your workers exactly when to arrive and how long they must work out in the field, they’re likely employees.

If yes, move to Question 3.

If no, the worker is an employee.

Question 3: Is the worker customarily engaged in an independently established trade, occupation, profession or business?

An independent contractor is generally someone who demonstrates business skill and initiative. Like the plumber, she’s building her client base to run an independent business. The independent contractor typically has her own specialized tools and equipment rather than using the farm’s tools and equipment.

If yes, move to Question 4.

If no, the worker is an employee.

Question 4: Does the worker have the opportunity for profit and loss as a result of the services?

Unlike an employee, the independent contractor has a stake in the success of
INDEPENDENT CONTRACTORS

the project or tasks assigned. They should have the potential to earn profit or conversely suffer loss.

If yes, move to Question 5.

If no, the worker is an employee

Question 5: Does the worker hire and pay her assistants (if any) and supervise the details of their work?

Independent contractors can choose to hire and pay assistants if that’s what it takes to get the job done. If any assistants are hired, these folks must be supervised by the independent contractor and not the farmer.

If yes, move to Question 6

If no, the worker is an employee.

Question 6: Does the worker make their services available to other clients or customer community?

An independent contractor typically has multiple clients and doesn’t work solely for one farm. If the worker primarily works for the farm, or is essentially “full-time,” it’s most likely an employee and not an independent contractor.

If yes, move to Question 7

If no, the worker is an employee.

Question 7: Does the worker meet at least 3 of the following elements?

- The individual has a substantive investment in the facilities, tools, instruments, materials, & knowledge used by the individual to complete the work.
- The individual is not required to work exclusively for the other individual/entity.
- The individual is responsible for satisfactory completion of the work and may be held contractually responsible for failure to complete the work.
- The parties have a contract that defines the relationship and gives
contractual rights in the event the contract is terminated by the other individual/entity prior to completion of the work.

• Payment to the individual is based on factors directly related to the work performed and not solely on the amount of time expended by the individual.

• Such work is outside the usual course of the business for which the services are performed.

• The individual has an IRS Determination (SS-8) of independent contractor status.

• If the worker does not meet at least three of these criteria, the worker is an employee.

If the worker meets three or more these criteria, the worker is an independent contractor.

**Now What?**

**Farms that do meet the independent contractor criteria**

*My neighbor Alex has a hay baler and I was thinking about hiring him to bale some hay for me this season. I am sure I can meet the above criteria. What next?*

Independent contractors are not covered by employment laws such as workers’ compensation, minimum wage, and others. As with any contract relationship, farmers should write down the terms of the agreement as a best practice.

**Farms that do not meet the independent contractor criteria**

*“We now realize that our day-to-day workers clearly don’t meet the criteria for independent contractors. What do we do now?”*

If you don’t meet the criteria, you likely don’t have an independent contractor. In all likelihood, the worker is an employee. First, there’s one more option: interns. Read the following section to confirm your status there. Or, assume you have an employee and skip to the last section.
Interns

Legal definition:

What is an intern? Unfortunately, the law does not provide a precise definition of an intern. The legal criteria for an intern emphasizes the educational dimension of the arrangement. Fundamentally, the intern, not the farmer, must be the “primary beneficiary” of the internship program.

Does your farm meet the legal test for a non-employee intern?

“I love having college students working on my farm over the summer. And I provide them extensive training. What about having interns instead of employees?”

“What if I decide not to form a nonprofit and therefore can’t have volunteers. Can I run my educational farm as a for-profit with interns instead of employees?”

These are tough questions, as the law surrounding non-employee interns is rather complex. Like Amanda and Ralph, farmers are attracted to offering “intern” positions because they want to offer a lot of education. However, farmers are often under the impression that because education is such a strong component, the intern is different than a regular employee. This is a misimpression. Simply providing education to a worker does not mean the worker is not an employee. Even if the farmer calls the worker an “intern,” the law will treat the worker as an employee unless they meet the legal test for interns.

In January 2018, the US Department of Labor (US DOL) updated its “legal test” for whether a worker qualifies as non-employee intern. The US DOL now applies the “primary beneficiary test” which matches the more flexible approach that several federal appellate courts have recently developed. The “primary beneficiary test” reflects the principle that to be a non-employee intern, the primary beneficiary of the internship program must be the intern, not the farmer. Under this test, the US DOL evaluates the following seven criteria to
determine whether a worker is the “primary beneficiary” of the relationship and thus a non-employee intern:

1. The farmer and the intern both understand that the intern is not entitled to compensation.
2. The internship program provides training that would be given in an educational environment.
3. The intern receives academic credit upon completion of the internship program.
4. The internship program corresponds with the academic calendar.
5. The duration of the internship program is limited to the time when the intern receives the education or training provided.
6. The tasks the intern performs provide significant educational benefit and they complement rather than displace the tasks of paid employees.
7. The intern and the farmer both understand that the intern is not entitled to a paid job when the internship program ends.

How does the farmer know if its internship program sufficiently meets these seven criteria of the US DOL’s “primary beneficiary test”? The reality is, there’s no absolute certainty. The primary beneficiary test is a flexible test. Not all seven criteria need to be met and no single criteria is determinative. Whether an intern is an employee depends on the unique circumstances of each situation.

What does this mean for farmers in Maine? It means there’s a level of uncertainty, which carries risks. What are the risks here? If the farmer treats their workers as non-employee interns and the law determines otherwise, the farmer risks having to pay back wages (i.e., if the state and federal agricultural labor exemptions to minimum wage do not apply), back taxes, penalties, and risks lawsuits.

With this in mind, farmers basically have two options. Farmers who are risk averse and want to play it safe should treat their interns like employees and follow all applicable employment laws. Farmers who are less risk averse can choose to follow the seven criteria in the US DOL’s “primary beneficiary test” the best they can. Farms that accommodate a worker’s formal academic
commitments, such as offering the intern position in the summer when school’s not in session, providing structured training with set curricula and learning objectives, tying the internship to an academic institution, and offering a limited term position will have an easier time arguing that the intern is not an employee.

For more details on these criteria on interns, see Section 2: Managing Risks of Interns and Volunteers in Maine.

Now what?

Farms that do meet the legal criteria for interns

“This is great! I’m nearly certain I meet the DOL’s primary beneficiaries test. I’m already working in partnership with a college and I’m certain I’ll be able to arrange academic credit for my interns. My mission is to help young aspiring farmers and I’m willing to dedicate my time and energy toward providing training to interns so they can start their own farms.”

Read Section 2: Managing Risks of Interns and Volunteers in Maine for more information on working with interns.

Farms that do not meet the legal criteria for interns

“I don’t think I meet the test. I know I can’t risk the harm of an enforcement action. What do I do now?”

Farmers uncertain if they meet the non-employee intern criteria should read Section 2: Managing Risks of Interns and Volunteers in Maine for more information. If these criteria are not met, the farm’s interns are legally classified as employees.

Employees

Legal Definition

What is an employee? An employee as someone who an employer directs or permits to work for his or her business.
Employee is the default category

The bottom line: If someone performs work for a for-profit business the assumption is that he or she is an employee. That is, unless that person can be classified as an independent contractor or a non-employee intern. Again, for-profit businesses generally cannot have volunteers, so that is not an option.

Now what?

What must farmers do when they have employees? They must follow all applicable state and federal employment laws. For an overview of these requirements, see Section 3: Basic Checklist for Hiring a Farm Employee in Maine.

Remaining Questions?

Farmer Amanda still has some questions, which are common to many farmers.

What about the websites and programs that help me find travelers and vacationers who work on my farm in exchange for housing and food?

Everything in this guide applies to worker networking services. The above are your options: independent contractors, interns, employees, or volunteers. There’s nothing else. No matter how the farmer finds the worker, they will fit into one of the above categories. Again, farmers should work under the assumption that everyone who performs work for a farm is an employee. The worker can only be classified as something else if the worker meets the criteria for a volunteer, intern, or independent contractor.

What about work trade and in-kind payment arrangements (i.e., room and board)? Do those affect their classification?

Work trade and in-kind arrangements do not affect the classification as described in this guide. Farmers can certainly pay their employees in room and board to meet any minimum wage requirements; however, that is a separate issue. For more details on in-kind arrangements, see the Farm Commons’ resource: Managing Risks of Interns and Volunteers in Maine.
What if my workers don’t care how they are classified?

It does not matter. By law, someone cannot waive their right to protections provided under employment laws. Unlike other areas of law, employment law is simply nonnegotiable. This is because of the overarching policy reasons behind employment laws, including the prevention of coercion and oppression in the workplace.

What if I still don’t know which classification my workers fall into?

Farmers who still have questions or are left with uncertainty as to the proper legal classification of their workers can seek further assistance from the following:

• State of Maine Department of Labor
• United States Department of Labor
• IRS
• An attorney familiar with agricultural employment laws in Maine

Conclusion

Employment law can seem overwhelming and complex. A key takeaway is that when in doubt, play it safe. If you treat your workers like they are employees, you are going a long way to minimize your liability risks.

Keep reading the next two sections for more information.

Getting Started

The Reality Of Uncertainty

Spoiler Alert: This guide cannot lay out exactly how to assemble a legally sound intern or volunteer program because the law itself is uncertain. Most folks believe that the law is black and white—all they need to do is find out what the law is and follow it. In legal reality, that’s not always the case. What should the farmer do to move forward? The first step is to learn the facts, which this guide provides. The second step is to carefully weigh the factors and make a personal decision. It’s not an easy process, but it’s a valuable one for every farm considering interns and volunteers.

Many farmers approach uncertainty, legal or otherwise, by weighing the potential costs against the potential benefits of taking on a level of risk. When thinking about the potential costs, what would a legal enforcement action under a “worst case scenario” mean for the farm? What if a volunteer gets injured while working on the farm and the farmer becomes responsible for hospital bills and has to pay penalties for not carrying workers’ compensation? Aside from the financial implications, what about all the worry and fear of such a scenario happening? As for the benefits, what cost savings does the farm achieve by not having to obtain workers’ compensation or pay minimum wage if required? What about the emotional stress of not being able to make payroll? For other farms, the sense of purpose and community that comes from integrating interns and volunteers into your farm is a significant benefit.

In the end, the right risk management strategy regarding interns and volunteers is a personal decision that depends on you and your farm. Your own financial, emotional, and business considerations all factor into the appropriate strategy for you. This resource can help you understand and assess those factors.

Employment Laws Generally Apply to Farm Interns and Volunteers

As readers will learn, most employment laws such as minimum wage and workers’ compensation apply to interns and volunteers. This is the case even though many farms offer win-win intern and volunteer programs. The interns or volunteers enjoy the time out on the farm, gain skills, and likely enjoy some fresh, healthy farm products. The farmer gets extra help and the joy of working with community members.
Although titles like “volunteer,” “intern,” or “apprentice” convey a positive working environment, the fact that these workers do the work of the farm means employment laws generally apply. Such laws may include obligations to provide minimum wage, workers’ compensation, and contribute payroll taxes—depending on whether state or federal agricultural labor exemptions apply.

Our Goal
This guide will explain the laws behind interns and volunteers. It also provides insights and strategies to help farmers reduce liability risks related to interns and volunteers. To facilitate the process, the hypothetical stories of farmers Amanda and Ralph are weaved in throughout. The guide will follow their decision-making process as they learn about the legal issues and begin to better understand their options for having interns and volunteers. Readers may recall Amanda and Ralph from Section 1.

Farmer Amanda is a beginning farmer. She has a small CSA and is looking into labor issues, including whether she can rely on some of her CSA members to do some of the farm work and help out with packing and such. She’s ultimately looking to grow and expand her business, and hopefully start selling at farmers’ markets and even restaurants to diversify and better improve profits.

Farmer Ralph is also a beginning farmer. He sells his products mostly at farmers’ markets and to local upscale restaurants. He’s a retired math professor and doesn’t depend at all on the farm’s income for his livelihood. It’s really just a hobby. Ralph’s main priority is to teach new farmers the ropes and pass on his legacy in this way. He loves teaching and really wants to help and train young farmers so they can go out and start their own farm businesses.

Interns: Generally Speaking, Interns Are Employees
“We would like interns on our farm, but we hear there might be legal issues to deal with. What is going on?”

The answer is: Yes, there are potential legal issues with having an unpaid intern. Interns are generally covered by employment laws—if the law doesn’t allow a farm to have an unpaid employee (or an employee without workers’
compensation), the farm can’t have an unpaid intern (or an intern without workers’ compensation). Amanda, Ralph, and any other Maine farmer will have to read this chapter to determine their obligations.

Situations Where Interns Are Not Considered Employees

It is possible to have an intern who is not an employee where very specific criteria are met. In January 2018, the US Department of Labor (US DOL) updated its guidance on whether a worker qualifies as a non-employee intern. If the intern is not an employee, they are not covered by employment laws.

The US DOL now applies the “primary beneficiary test” which matches the more flexible approach that several federal appellate courts have recently developed. The “primary beneficiary test” reflects the principle that to be a non-employee intern, the primary beneficiary of the internship program must be the intern, not the farmer. Under this test, the US DOL evaluates the following seven criteria to determine whether a worker is the “primary beneficiary” of the relationship and thus a non-employee intern:

1. **The farmer and the intern both understand that the intern is not entitled to compensation.**

   If a farmer chooses to have an unpaid intern, she needs to be sure to clearly communicate the arrangement with the intern. The best approach is to have the intern sign a statement at the get go acknowledging that this is an internship program and that limited or no compensation will be provided. Not only will this ensure that the farmer and the intern have a shared understanding that the position is unpaid or paid at less than the minimum wage, it provides proof that this arrangement was agreed to in advance should any issue arise.

2. **The internship program provides training that would be given in an educational environment.**

   The farm must provide training to the intern. Ideally, this training is structured, or similar to a classroom style education. In addition, the training should be transferrable to other farms across the industry. In this way, the internship should prepare the intern for launching her career in farming or starting her own farm operation, not simply for working on that farm. Farms that establish set curricula and learning objectives and monitor the intern’s learning achievements
are more likely to have a non-employee intern.

3. The intern receives academic credit upon completion of the internship program.
While academic credit is not essential, it can go a long way in helping the farmer establish a legally sound internship program. Having ties to an educational institution is an important risk management step when building a non-employment intern program.

4. The internship program corresponds with the academic calendar.
It’s more likely an internship program if the farm accommodates a worker’s formal academic commitments, such as offering the intern position in the summer when school’s not in session. Similarly, it’s best if the farmer allows the worker to return to school in August or September, even though this might be the height of the farm’s harvest season.

5. The duration of the internship program is limited to the time when the intern receives the education or training provided.
Workers that work on the farm year-round or for multiple seasons are more likely employees and not non-employee interns. The most risk averse approach is for the farm to limit the duration of an internship program. The duration should provide just enough time for the intern to learn the set curriculum or learning objectives.

6. The tasks the intern performs provide significant educational benefit and they complement rather than displace the tasks of paid employees.
It likely doesn’t take 8 hours of picking carrots to learn how to pick carrots. Nor does it take 40 hours of weeding to learn how to weed! These sorts of tedious and time-consuming tasks would likely not be appropriate to assign to an intern under this factor. The intern should only perform work to the extent that she needs to learn the task at hand. Similarly, if the farm hires less employees because the intern performs tasks that a paid employee would ordinarily perform, it will look more like an employee than an intern. With that said, an unpaid intern can perform some tedious tasks, so long as the intern’s training is the number one priority.
7. The intern and the farmer both understand that the intern is not entitled to a paid job when the internship program ends.

The internship program must serve to set the intern up for a career in the industry; it cannot simply be a trial period, or training for future work on that farm. The best approach is to have the worker sign a statement at the get go explaining that there’s no guaranteed employment position on the farm once the internship position ends.

**What Does This Mean For The Farmer Who Wants To Have Interns?**

How does the farmer know if its internship program sufficiently meets these seven criteria of the “primary beneficiary test”? The reality is, there’s no absolute certainty. The primary beneficiary test is a flexible test. Not all seven criteria need to be met and no single criteria is determinative. Whether an intern is an employee depends on the unique circumstances of each situation.

These strategies feel uncertain, right? There is an alternative worth mentioning: Farmers can choose to follow all employment laws for their internship program. Then the question of whether the intern is eligible to be treated as a non-employee is insignificant. **The single best risk management strategy is to simply know and follow all employment laws for every intern.**

Treating interns like employees isn’t going to work for some farms. Farms wanting a non-employment intern program should become familiar with the seven criteria in the US DOL’s “primary beneficiary test.” They can then make a personal decision. The appropriate approach to a non-employment intern program depends on the farmer’s level of risk aversion.

**Farmers willing to accept risk may choose to follow the seven criteria of the “primary beneficiary test” the best they can.** This is still not an easy standard to meet. Fundamentally, education is an important part of any non-employment intern program, the structure of the position matters. Farms that accommodate a worker’s formal academic commitments, such as offering the intern position in the summer when school’s not in session, providing structured training with set curricula and learning objectives, tying the internship to an academic institution, and offering a limited term position will have an easier time arguing that the intern is not an employee.

**What about farmers who can’t sufficiently meet the US DOL’s “primary beneficiary test”?**
“I don’t meet the US DOL’s “primary beneficiary test”. My farm is a business—all workers need to pull their weight. But, I really want to have young college students working on my farm over the summer. And, I like the idea of calling them “interns” as this seems to make them more open to learning my eccentric farming practices. So now what do I do?”

Farmers like Amanda who can’t or don’t want to meet the “primary beneficiary test” for non-employee interns have “employees.” They can still call their workers “interns” but they must treat them as employees when it comes to legal requirements. They must follow all applicable state and federal employment laws. To get started, see Hiring a Farm Employee in Maine: Tax and Paperwork Checklist.

(While it’s unlikely, farmers could check if their “interns” meet the legal criteria of independent contractors, which allows more flexibility than employment. See Classifying Workers on Maine Farms: Are they Independent Contractors, Interns, Volunteers, or Employees?)

What about farmers who meet the DOL’s “primary beneficiary test”, or are willing to take the risk and simply comply with the federal court’s lenient approach?

“I meet the “primary beneficiary test”. Now what?”

Farmer Ralph is delighted! He’s already working in partnership with a college and is certain he can arrange academic credit for his interns. His retirement provides the money he needs to make a living. His mission is to help young aspiring farmers and he’s willing to dedicate his time and energy toward training his interns so they can start their own farms. He doesn’t care whether his farmers’ market or restaurant sales are low. He simply wants to provide his interns with diverse experiences in a variety of market channels. He feels strongly that he meets the DOL’s “primary beneficiary test”. Either way, he was thinking about starting a non-profit that is exclusively dedicated to education.

Farmers like Ralph who emphasize the educational component of the internship program and have established ties with academic institutions most likely have legally sound non-employee “interns.”

While it may not be necessary for these farmers to follow employment laws for
their interns, these farmers must take special steps to keep detailed records of the internship arrangement. Primarily, this will help them run a more efficient and effective internship program. In addition, the paperwork leaves a trail of proof of the intern program’s legitimacy should an enforcement action ever happen. The following provides some examples of documents and records that should be maintained.

- **Keep records of hours worked, tasks performed, and training curriculum utilized for the internship program**

  One way to do this is to have the intern keep a log book that the farm then retains or copies at the end of the season. This log book could also provide a way to monitor the intern’s progress throughout the program. Either way, these records should be accurate and kept on file for at least 3 years.

- **File reports and paperwork with affiliated schools or institutions that are providing course credit**

  Verification of an academic connection will help support the farm’s case that the internship emphasized the structured, classroom style education that the US DOL’s “primary beneficiary test” highlights. The intern might appreciate this attention as it may help the intern get the academic credit they need.

- **Have the intern sign an agreement acknowledging they’re a non-employee intern**

  Getting the details of the arrangement in writing, including the fact the position is not employment, ensures that the farmer and the intern have shared expectations. Having a shared understanding helps foster good relations throughout the internship, which is undoubtedly a good thing. In addition, having the intern acknowledge key aspects of the arrangement in writing, including that the intern is not entitled to compensation and there’s no guaranteed position once the internship ends, are criteria in the US DOL’s “primary beneficiary test.”

- **Get insurance coverage for worker injuries**

  Even though farmers in Maine are not legally required to carry workers’ compensation for non-employee interns, it’s highly recommended that the farm carry insurance to cover injuries for all workers. Farming is dangerous and accidents happen. With no insurance, the farmer is subject to huge legal liability and financial risk should an intern get hurt. The best option in Maine is
for the farmer to simply carry workers’ compensation for interns if it is required to do so for employees—which will be the case for most farms. While Maine provides smaller farms several exemptions to securing workers’ compensation, these farms must still carry some form of employers’ liability insurance for their employees. Therefore, another option could be to purchase a commercial general liability plan that would cover the intern.

For more information on available workers’ compensation exemptions in Maine, see the Hiring a Farm Employee in Maine: Tax and Paperwork Checklist. For more general information on insurance coverage, see Farm Commons resource—Managing the Sustainable Farm’s Risks with Insurance: Navigating Common Options.

What about other options?
Amanda is feeling disappointed so she has a couple of other creative questions.

“I can’t sufficiently meet the US DOL’s ‘primary beneficiary test’ and I don’t want to follow all employment laws—those laws are a huge burden. I’m going to have my intern sign an agreement that they aren’t an employee. Won’t that work on its own?”

Amanda has a nice idea in theory, but it doesn’t work in reality. If the law says a work position is employment, it’s employment, regardless of any agreement between worker and employer. By law, a worker cannot waive their right to minimum wage or other employment law protections. Unlike other areas of law, employment law is simply nonnegotiable. This is because of the overarching policy reasons behind employment laws, including the prevention of coercion and oppression in the workplace.

In Maine, an employee must receive at least the minimum wage if the farm has 500 or more man-days in a calendar quarter of the previous year OR if the farmer is assigning non-agricultural tasks to workers. See the Hiring a Farm Employee in Maine: Tax and Paperwork Checklist for more details.

“Can I have an apprentice instead of an intern? Does that change anything?”

Generally speaking, the same rules for interns apply to apprentices, or any other title a farmer might assign to a person for whom they do not want to
follow employment law obligations. There is a different legal framework for an apprentice, but it doesn’t help much. More often than not apprentices are also considered “employees” in the eyes of the law, and therefore the basic employment laws need to be followed.

There is one exception to the minimum wage requirement specific to apprentices. If market conditions are such that work opportunities will be expanded for a specific trade by paying less than minimum wage, apprenticeship programs do not need to comply with minimum wage requirements. But this is a well orchestrated arrangement, often through trade schools or community colleges. The program first needs to prove the market conditions, including projections of increased opportunities resulting from apprenticeship programs. They’ll also need to get government approval. For more information on registered apprenticeship programs in Maine, contact the Maine Department of Labor, Maine Apprenticeship Program.

“Okay, if I choose to follow employment laws, can I still call my worker an apprentice or intern?”

Yes. The bottom line is that regardless of what you call the workers, the farmers should assume they are employees unless the farm’s internship program sufficiently meets the US DOL’s “primary beneficiary test.”

Volunteers: For profit farms generally cannot have volunteers

“What if I just use volunteers? Can I call my interns volunteers? I know many farms have volunteers and they aren’t following employment laws. Does this have legal complications?”

Understanding why the law doesn’t allow for-profit farms to have volunteers

Legally speaking, a for-profit business cannot have a volunteer. The law defines employing someone as permitting someone to work for the business. The fact that the worker isn’t paid is not relevant—the farm is being helped and the farm owner is permitting the work. That means the worker is an employee (unless they are an intern or independent contractor). The federal definition of a
A volunteer is someone who is motivated by charitable or humanitarian reasons for a public agency with no expectation of receiving compensation for her services. So, volunteering for a for-profit business just doesn’t work under the dominant legal paradigm.

The reasoning behind this is again about preventing exploitation and coercion of workers. If a business could “persuade” employees to volunteer without any legal repercussions, the resulting economic and power dynamic would easily create unjust situations. A notion of fairness is also at play; if the business is operating to make money, workers deserve compensation for their labors.

“‘My CSA members work in return for their share, come and pick their own produce, and we have family days where I incorporate picking as a fun activity for kids. Is that somehow prohibited because it’s like volunteering and I’m a for-profit business?’

Good question! We have two rules of thumb when deciding if a situation creates a volunteer-turned-employee situation: 1) Is the work of a for-profit business being performed? And 2) If it looks like an employee, it’s an employee. The following scenarios give a better idea of how this all plays out in legal reality.

**U-pick operations: People paying to pick their own product are not generally employees.**

Across the country, farms offer customers the chance to pick their own produce at the farm before the customer pays for it and takes it home. Is this employment? The simple answer is no. Focus on the first rule of thumb: Is the work of a for-profit business being performed? A U-pick farm is in the business of offering customers the opportunity to pick their own product. So, the work of a u-pick farm is to advertise to customers, give them a parking space, tell them where to pick, take their money, and so forth. If volunteers were to do those business activities, that would be employment. Actually, picking the fruit is not the farm’s work; the opportunity to pick fruit is the thing customers are buying. It isn’t volunteering, either. Rather, the person is simply a customer..

**Gleaning: Picking unmarketable product for a food shelf is not generally employment.**
By definition, gleaning is when non-marketable product is removed from the fields. Referring back to the first rule of thumb, removing non-marketable product from the fields is generally not the work of the farm. If the product truly isn’t marketable, no business reason exists to remove it. (Yes, field sanitation may motivate removal but a farmer would likely choose a more efficient method than hand labor followed by transit to a food pantry.) Allowing a nonprofit organization to supply hand labor to remove the product and take it to the food pantry does not create employment for the farm. The volunteers are doing the work of the nonprofit, perhaps, but nonprofits have much greater latitude to have volunteers without creating an employment situation.

**Recreation: It’s okay for folks to recreate at the farm.**

If a farm has CSA members coming out to the farm solely to pick for themselves, then they are not working for the farm. The farm may have a u-pick component to the farm, which is addressed above. Or, the farm may simply allow customers to pick products as they wish. Let’s say that a mother and her child come to Amanda’s farm to pick up their CSA share. While they are there, they pick some raspberries. Turning to our second rule of thumb, this does not look like employment. The mother and her child weren’t asked to pick the raspberries and there is no expectation that they do so; it was part of the recreation opportunities on the farm.

**Worker shares: Folks who come out and “volunteer” on the farm in exchange for farm products are most likely “employees.”**

Let’s say instead that Farmer Amanda sets schedules, assigns specific tasks, requires a certain level of work in return for a CSA share, tells the CSA members what to do, has expectations in terms of speed and effectiveness of the tasks at hand, and, as a result the work of the farm is achieved by the “volunteer.”

Farms often enter such arrangements with CSA members or other community members and friends where “volunteer” time is required in exchange for farm products. This type of an arrangement is also known as a “worker share”, “working sharer”, or other title. In the eyes of the law, this is most likely seen as employment. Recall that under the legal definition, an employee is someone who employers direct or permit to work for them under a for-profit business. Unlike a volunteer, the employee expects compensation for her services. In addition, the employee typically has little discretion over the work that is assigned or how the work is performed. The farmer sets the schedules and assigns duties for worker
shares and folks doing the work expect compensation—here, in the form of farm product. The CSA member or worker share is most likely an employee.

What does this mean for the for-profit farm that wants to have volunteers?

Employment laws most likely apply to volunteers

In summary, “volunteers” who actually engage in work for a for-profit farm are most likely considered “employees.” This means that all the applicable employment laws must be followed for these workers. To start, review Section 3, Basic Checklist for Hiring a Farm Employee in Maine. The following highlights some key points relevant to “volunteers” engaging in work for a for-profit farm:

- **Workers compensation**: Maine law provides smaller farms several exemptions to carrying workers’ compensation. Even so, these farms must still secure some form of employers’ liability insurance for their employees.

- **Minimum Wage**: For workers engaged in agricultural labor tasks, the farm must pay at least the federal minimum wage unless the farm meets the “less than 500-man day” federal exemption for agricultural labor. For workers engaged in non-agricultural labor tasks, the farm must pay at least the higher Maine minimum wage.

- **In-kind payments**: For work shares where the farm is providing farm product in exchange for hours worked, the value of the farm product must be at least equivalent to the minimum wage owed. Federal law sets forth strict guidelines and limitations for how such in-kind payments must be valued and recorded. More detail is provided in the next section: Paying In-Kind Wages.

“It will take time to adapt my volunteer programs to be consistent with employment rules. What can I do to manage risk right now?”

Prioritizing risk management for volunteers— injuries and wages

Following all these employment laws can be overwhelming for farmers with volunteers of any type. After all, even though for-profit farms are motivated to some degree by profits, many also emphasize social and ecological missions such as providing healthy food to the community and adopting conservation measures and
farming practices. This explains why so many folks are willing to volunteer on farms with joy!

Farmers with for-profit operations must realize that they are taking on some level of risk if they do not fully comply with applicable employment laws when having “volunteers.” With that said, a couple areas present particularly high risk. It’s highly recommended that farmers pay close attention to two areas as soon as possible: injuries and minimum wage requirements.

□ **Carry workers’ compensation for volunteers**

Farming is dangerous and there’s a high potential that injuries will happen no matter what precautions are taken. Even if a volunteer gets hurt and has no intention of suing the farm, the volunteer’s health insurance company will likely have a different perspective. Insurance companies have a right to file a claim against a farm where an injury occurs, even if the injured person doesn’t want to file the claim.

In addition, employers are generally required to carry workers’ compensation or some other form of employer’s liability insurance for all employees (and volunteers who are actually employees) in Maine. If the farm doesn’t have workers’ compensation or another form of liability insurance in place, the farm could be fined even if an injury never occurs.

To avoid such risks and headaches, farmers should strongly consider carrying workers’ compensation or other liability insurance to cover injuries of any and all volunteers.

□ **Follow wage requirements if volunteers are paid**

Farmers who provide some compensation to volunteers—whether in the form of cash or in-kind payments—run the risk of making it look more like an employee arrangement. Farmers who are required to pay minimum wage to their employees (i.e. farms with 500 or more man-days or farms assigning non-agricultural tasks to their volunteers; see Section 3 for more details), should strongly consider ratcheting up any compensation provided to volunteers to at least the minimum wage amount. Otherwise, they may be better off offering no compensation, as it will look less like an employment arrangement.

Keep in mind that taxes, recordkeeping, eligibility to work requirements, and so on all still apply. However, these are not necessarily the highest risk factors considered.
by most farmers. It’s up to each farmer to assess their risk while realizing what’s at stake. For basic obligations when hiring an employee, refer to Section 3 for more details.

What about online volunteer matching services?

Many farms have used online services that connect volunteers to farmers. These volunteers are often domestic or international travelers who work in exchange for room and board. Farmers may be asking, can these folks work for free in exchange for room and board? Are these types of work-for-lodging arrangements exempt from employment laws?

The answer is no. Work-for-lodging arrangements are not any different from what was discussed above for interns and volunteers. Folks who do work on a for-profit farm under the direction of the farmer for some sort of compensation—including room and board—are employees in the eyes of the law and therefore employment laws apply.

This is not to say that work-for-lodging is illegal. It’s more accurate to say that the law has not caught up to these innovations. Many online sites and services such as shared rides and shared home-stay services are relatively new and on the fringe of the law. It takes time for the law to adapt itself and apply to new systems and structures. This naturally creates a level of uncertainty. With that said, farmers need to be cautious, as having a work-for-lodging volunteer involves uncertainty and therefore a degree of risk. The farmers could face legal and financial liability in the form of injuries, wage claims, and various enforcement actions.

So what should the farmer do? The truth is that volunteering comes in all shapes and sizes. The answer to what a farmer should do to manage and reduce these risks is going to depend on the individual circumstances of each farm, including the farmer’s level of risk adversity, the types of activities the volunteer is engaged in, the duration of the arrangement and so on. The purpose of the guide is to explain what the law is. The risk-managing conclusions are up to you!
Non-profit farms face some limits on having volunteers

Ralph’s idea of setting up a non-profit farm so he can have volunteers will certainly work for him given his mission and dedication to training. But it will only get him so far. For the most part, non-profit farms can have unpaid volunteers. However, non-profit farms need to pay attention to three key limitations.

1. **Non-profit farms cannot ask a regular employee to “volunteer”**

   A non-profit farm cannot suddenly require a regular employee to do the work they regularly do for free or require additional unpaid work. This is obviously unfair to the employee who expects compensation for their work. With that said, the farm can have a one-off event, such as a weekend fundraiser, and open up volunteer opportunities to regular employees. However, the farmer cannot require employees to participate in such “volunteer” opportunities or make it in any way a condition of continued employment. Effectively forcing an employee to volunteer is by no means volunteering!

2. **Non-profit farms cannot provide unpaid volunteers everything they need for their livelihood in exchange for their work**

   Nonprofit farms also need to be cautious about situations where they’re providing “volunteers” everything they need for their livelihood in exchange for their work. This is based on a U.S. Supreme Court decision, which is known as the *Alamo* case. The *Alamo* case is the strongest legal guidance we have to go on to determine when it’s acceptable for non-profits to have volunteers. The background facts of the case help put these guidelines in perspective.

   The *Alamo* case involved a nonprofit organization that ran a set of commercial operations including making and selling clothing, distributing candy, and raising animals to sell as meat. The organization ran these operations to help train and rehabilitate previously homeless folks with drug dependency issues. The organization provided these folks food, shelter, and job training. In exchange, the recipients “volunteered” for the non-profit’s different commercial operations. The Supreme Court said this was not okay. Here’s why. The “economic reality”
was that the nonprofit provided these folks everything they needed for their livelihood. They were dependent on the arrangement for their survival and couldn’t simply leave. This type of arrangement put the workers in a potentially coercive power structure, which is precisely why employment laws exist.

The takeaway is this: If the non-profit farm provides everything its volunteers need—such as room, board, and clothing for long periods of time—it risks creating an employment relationship.

3. Non-profit farms cannot use unpaid volunteers to compete at an unfair advantage with other farms

Non-profit farms must also be sure not to undercut prices to give them a leg up over other farms. This is again based on the Supreme Court’s insights in the Alamo case. The court pointed out that the “economic reality” of how the nonprofit was structured gave the non-profit an unfair advantage over competitors. Because the non-profit wasn’t paying the workers minimum wage, it was able to sell its candy, clothing, and meat products at a far lower price point than their competitors. The court said this isn’t fair to others engaged in commerce. Based on this economic reality, the court said that the “volunteers” were actually employees and that the non-profit was required to pay them minimum wage and follow other employment laws.

The lesson here is that non-profit farms can’t leverage their unpaid volunteers as a way to compete at an unfair advantage with other farms. The farm must play fair, or it loses its privileges as a non-profit to have volunteers.

What does this mean for the non-profit farm that wants to have volunteers?

Farmers who have or are thinking about having a non-profit farm will want to be careful about how they structure volunteer arrangements. First, they must not require regular employees to “volunteer” for free. Second, it’s recommended that the non-profit farm not provide their volunteers with everything needed for a livelihood—such as room, board, clothing, and so on. The non-profit farm may want to consider making its volunteer positions part-time or temporary as this will less likely appear as though the volunteers are depending on the nonprofit entirely. Finally, the non-profit farm must be careful not to compete with an unfair advantage with for profit farms. A simple way to do this is to price the items the non-profit farm sells at market-level prices.
Paying In-Kind Wages

“I’m finally accepting the fact that my workers are employees. And, I did the calculations and I don’t meet the federal “500 man-day” agricultural labor exemption to minimum wage. I understand that I legally have to pay all my employees at least minimum wage. But, I don’t have a lot of cash flow. I’ve decided I want to pay wages in the form of food and lodging. Is this okay?”

In a word, yes, it’s okay to pay wages in the form of food and lodging. If in-kind compensation is provided on top of a cash payment of at least the minimum wage, the farmer has more flexibility. In other words, if the farmer pays her employee $7.25 per hour in cash and on top of that provides lunchtime meals as a bonus, the farmer doesn’t have to comply with the legal requirements for valuing and recording the costs of the lunches provided (discussed below). Where in-kind payments are used to achieve at least the minimum wage, the rules below apply.

Minimum wage refresher

Farms with less than 500 man days of agricultural labor in each calendar quarter of the previous year do not have to pay minimum wage. Those with 500 or more man days do. In addition, these exemptions only apply to agricultural labor. The federal definition of agricultural labor is very limited and likely does not include tasks that are off-farm or tangential to farming—including agri-tourism, value-added, packing other farms’ products, and so on. Diversified farms that assign their workers such non-agricultural tasks must pay these workers at least minimum wage for the entire workweek in which non-ag labor is performed.

Following the Rules

Maine farmers who are obligated to provide at the minimum wage and who provide in-kind wages to meet that obligation must follow rules. When in-kind wages are paid to cover minimum wage owed, additional rules apply. The law has strict guidelines and limitations on how to value and account for in-kind payments made to cover minimum wage requirements. Before we dive into the legal requirements, we need to reframe the lingo that we’ll be using.

Most folks think of an in-kind payment as just that, a payment. Typically, when
making in-kind payments farmers add up all the in-kind payments and then
top it off with cash to cover anything remaining. However, the law thinks of it
differently. The law assumes that a cash payment is being made to cover the
minimum wage. So it thinks of the payment of in-kind wages as a deduction
from the cash wage. Along these lines, the farmer would say: “I owe you $200
in minimum wage. I’m offering you lodging that is equivalent to $100 and meals
that are equivalent to $50, so I’m deducting the $150 from the $200 in cash
owed.”

It’s really all the same in the end. However, this guide is using the phrase
“deduction from wages” because that’s how the law thinks about it.

- **Deduct only in-kind payments that are allowed by the law and authorized
  and agreed to by the employee**

The law specifically sets out what can and cannot be deducted from an
employee’s paycheck. Specific types of in-kind wage deductions that are
permitted by the law include meals, housing, and transportation. Nevertheless,
the farmer cannot make deductions for these items unless the worker willingly
authorizes it and actually uses or takes these items when offered.

For example, if the farmer prepares daily lunches for her workers, she cannot
automatically deduct the value of these meals from all her workers’ paychecks.
She can only make the deduction for employees that actually eat each of the
meals offered. Farmers providing meals will therefore have to keep track of who
eats what, whether through a log book or some other system.

A farmer cannot deduct items that would simply be for her own convenience or
benefit. Examples of such items include tools and equipment used on the farm.
Requiring the employee to pay for these items financially benefits the farmer as
she’s passing on a necessary business expense. A farmer can deduct from wages
for such items if, and only if, the farmer has already fulfilled her obligation of
paying any minimum wage owed AND it does not financially benefit the farmer
AND the employee willingly authorizes it.
“I would like to account for the value of the education I provide when I determine an intern’s wage. Can I deduct for educational value?”

Education and training provided to workers falls into the category of something that’s primarily beneficial to the farmer. Sure, the worker benefits from learning general farming practices. But it’s really the farm that benefits the most by having well trained, efficient workers. The farmer could certainly put a value on the education and training she’ll provide and use that added value as a marketing piece to attract good workers.

Another option would be to run a separate educational series and charge employees tuition for it. However, the farm cannot force its workers to participate in these trainings. That would for all intents and purposes be the same thing as deducting it from their wages!

▪ Have the worker sign an agreement acknowledging the in-kind payment arrangement

Any in-kind arrangement that the farmer has with an employee to fulfill the minimum wage obligation must be in-writing and signed by employee at the get go. Getting the arrangement in writing helps ensure that the farmer and the employee have a shared understanding of the details. This alone can help prevent unmet expectations or disagreements. In addition, it provides written proof that wages were in fact paid if an issue were to ever arise.

▪ Properly assess the value of the lodging and meals

“Okay, so I want to deduct for meals and lodging. I have to follow the federal rules because the meals and lodging are helping me satisfy my minimum wage obligations. But how do I value it?”

The federal rules set out a very specific method for determining the value of in-kind payments. Here’s the rule:

Farmers can deduct the lesser of two things:

+ The fair market value, or;
+ The actual cost to the farmer in providing it

This is easier to understand through an example. Let’s say that Farmer Amanda has a mobile home on her property that’s completely paid off. She wants to let
of her workers stay there in exchange for work. How much can she deduct for this lodging?

The first step is to determine the fair market value. The question to ask is what do mobile homes in Amanda's area rent out for? If she's in a rural area of Maine, it might not be much. If she's near the heart of Portland or some bustling small town, it will, of course, be more. Let's say the going rate is $400 a month for Amanda's area. The next step is to determine what it actually costs Amanda to have this mobile home. Let's say she's already paid it off in full, so her costs are minimal. Perhaps Amanda is only paying utilities for operation, which run her about $75 a month. This is the lessor of the two. Therefore, $75 a month for lodging is all that Amanda can deduct from the minimum wage she owes her worker. (Please note that Amanda's valuation must comply with 29 CFR 531.3, which is not discussed in detail here. This is a simplified example. Farm Commons' forthcoming guide to in-kind wages will provide more information.)

Basically, the farmer cannot profit from offering in-kind wages. If Amanda deducted more than it cost her to provide housing, she would profit. Farmers providing lodging will need to do some research on rent prices in their specific area to provide evidence of the going rate. They'll also have to be honest about what the lodging actually costs them. Bottom line, they'll need to keep records to support the value that is being deducted in case an issue or discrepancy about wages paid were to ever arise—including a tax audit or a wage claim.

This same formula applies to meals. Let's say that Amanda offers lunches and dinners for her workers. What can she deduct for these meals? First, she'll need to determine what the fair market value is for lunch and dinner in her area. Let's say it's $8 for lunch and $10 for dinner for a comparable meal at the diner down the road. Now Amanda needs to figure out how much it costs her to make the meal. This includes her costs of the ingredients, including any products from the farm, as well as her time to make the meal. If it's less, say $5 a meal, she can deduct only $5 per meal as in-kind wages. Farmers will need to keep records of how they valued the meals provided in case a dispute or discrepancy arises.

Most farmers are probably thinking: “This is way too cumbersome! Is it even worth it?” That question can only be answered by each individual farmer. The best route is to play it safe and be conservative by following the required method for valuing in-kind payments as well as keeping records sufficient to show you are complying with the requirements. Alternatively, a farmer may simply decide
it’s not worth it and simply pay any minimum wage owed in cash and provide in-kind payments as a bonus.

□ **Itemize deductions on each pay stub**

Any deductions made for in-kind wages must be itemized on the pay stub that is provided to the employee at each pay period. This is required by law as it provides the employee the opportunity to see what has been taken each time. In addition, it provides yet another way to prove that in-kind payments were in fact made.

Some farmers who provide enough cash to meet the minimum wage obligation would like to exclude lodging and meals from wages in order to reduce their tax burden. This is an entirely different issue with its own set of criteria and is beyond the scope of this guide. Farmers who are in this situation should also seek the advice of a tax attorney or accountant or contact the IRS.

□ **Investigate tax obligations**

Wages paid in anything other than cash for agricultural labor are exempt from FICA (i.e. social security and Medicare tax) as well as federal income tax withholding obligations. This means that the farmer would not need to withhold federal income tax on the non-cash wages. In addition, neither the farmer nor the employee would need to pay social security and Medicare taxes on non-cash wages. However, taking advantage of this exemption comes with a whole new set of limitations and recordkeeping obligations. What’s more, it raises a huge risk for an audit. For more details on the risks and requirements of utilizing this exemption, see Farm Commons resource—Paying In-Kind Wages: The Federal “Commodity Wage” Exception to Payroll Taxes.

**Other Rules When Providing Lodging**

An array of laws come into play when farmers provide housing to their workers. These include zoning, federal Occupational Safety and Health Act (OSHA), and the federal Migrant and Seasonal Farmworker Protection Act.

□ **Look into the local zoning code**

Most, if not all, zoning ordinances have something to say about housing and occupancy of residences. Some zoning laws include restrictions on how many people may live on the property or how many non-related people may live in a single residence. Zoning laws could also have limitations or prohibitions on
Some farmers who provide enough cash to meet the minimum wage obligation would like to exclude lodging and meals from wages in order to reduce their tax burden. This is an entirely different issue with its own set of criteria and is beyond the scope of this guide. Farmers who are in this situation should seek the advice of a tax attorney or accountant or contact the IRS.

temporary structures such as RVs, tents, and yurts. Bottom line, farmers who provide housing to their workers will need to look into their zoning ordinance to be sure their plans coincide with what is permitted. While farmers could play the game of wait and see, they run the risk of costly fines and disputes down the road. They could even be forced to take down a structure that doesn’t comply with the ordinance. One approach would be to get a copy of the ordinance and read it yourself. However, these ordinances are not always a fun and straightforward read. Farmers could also ask neighbors or other farmers who house workers. Or, they could call the local zoning office to ask their questions directly.

- **Determine whether by providing housing to workers the farm is subject to the federal Occupational Safety and Health Act (OSHA)**

Farmers must be aware that by providing housing to their workers, they may subject their farms to an inspection under the federal Occupational Safety and Health Act, commonly known as OSHA. Although OSHA is not generally enforceable against smaller farms, that exception does not apply when housing is provided in a “temporary labor camp.” Temporary labor camps are defined broadly. Basically, they include any housing that is provided to a temporary worker as a condition of employment. In other words, it’s a temporary labor camp if the worker, for all intents and purposes, has no other choice than to live in the housing provided by the farm based on the location or other circumstances of the job. For example, this could be the case if the farm is located in a rural area, and there’s practically no other affordable place nearby to live. If this is the case, the farmer will want to be sure that they are in full compliance with OSHA housing standards.

Farmers wanting to learn more about OSHA enforcement when providing housing, as well as a basic overview of the housing standards, can refer to Farm Commons’ resource—Paying In-Kind Wages: OSHA Impacts When Providing Housing. The US Department of Labor oversees OSHA compliance and enforcement on farms in Maine. Farmers in Maine can contact the federal OSHA offices in Augusta or Bangor for more information. In addition, the Maine Department of Labor’s SafetyWorks! Program provides free, on-site OSHA consultation services to eligible employers. Detailed information is available on the Department of Labor’s website: https://www.maine.gov/labor/workplace_safety/.

Some farmers who provide enough cash to meet the minimum wage obligation would like to exclude lodging and meals from wages in order to reduce their tax burden. This is an entirely different issue with its own set of criteria and is beyond the scope of this guide. Farmers who are in this situation should seek the advice of a tax attorney or accountant or contact the IRS.
Determine whether the farm is subject to the federal Migrant and Seasonal Farmworker Protection Act

When a farmer provides housing to “migrant workers,” the farmer may subject the farm to the federal Migrant and Seasonal Agricultural Worker Protection Act (called the MSPA) requirements, which the Maine legislature has adopted. Despite what many may believe, “migrant workers” are not limited to out-of-state or foreign workers. Migrant workers include anyone who must stay overnight away from their regular home in order to make it feasible for them to work on the farm. A migrant worker could be someone who regularly lives just an hour or two away from the farm, if such a lengthy drive makes it impractical for them to fulfill their obligations on the farm each day they’re required to work.

A few exemptions to the MSPA are available. Just as for the federal minimum wage, farms that have fewer than 500 man-days in each calendar quarter of the previous year are exempt. In addition, farms that are exclusively owned and run by a single farmer or his or her immediate family members (i.e. legal spouse, children (biological, step, adopted, foster), and parents) are also exempt. Finally, if the housing provided is also provided to the general public, the farm is exempt from having to comply with the MSPA.

Farmers who provide housing to “migrant workers” and don’t meet one of the available exemptions must comply with the MSPA requirements, which includes maintaining certain housing conditions and following recordkeeping and disclosure requirements. The MSPA is overseen by the Bureau of Labor Standards, Maine Department of Labor. For more information farmers can contact the Bureau’s office in Augusta.

Farmers wanting to learn more about the MSPA requirements can refer to Farm Commons’ resource—Paying In-Kind Wages: Migrant Worker Laws and Providing Housing.

Conclusion

This guide provides an overview of selected legal standards and requirements for farmers who have or want to have interns and volunteers. This area of law carries a level of uncertainty. With this uncertainty, farmers have the opportunity to strategically choose the approach they want to take.
Farmers who have a high level of risk aversion may want to take a conservative approach. This basically means treating their interns as though they were “employees” and following all applicable employment laws. Farmers who are willing to take on some degree of risk may choose to follow the seven criteria in the US DOL’s “primary beneficiary test” as best they can. Ultimately, farmers who choose to have unpaid interns will want to be sure to emphasize the education dimension. A good option is to partner with a college or academic institution and offer credit. However, this alone is likely not enough to have a legally sound internship. In addition, farmers who choose to have unpaid interns will want to be sure to keep accurate records of the hours worked and activities performed by the interns as well as the curriculum and training provided. This will provide proof of the legitimacy of the program should a dispute or enforcement action arise.

As for volunteers, the law is pretty clear that for-profit businesses are not permitted to have unpaid volunteers. To play it safe, for-profit farms may want to consider following all applicable employment laws for volunteers who work on their farm. This includes carrying workers’ compensation for these volunteers as well as paying minimum wage unless the farm falls within the federal agricultural labor exemption.

This guide also discusses some basic guidelines for paying workers in-kind wages. Farmers who have or are thinking about having worker shares or otherwise paying their workers in-kind should review and follow the Paying In-Kind Wages section of this guide in detail.

Additional resources are referred to throughout this guide. Keep reading through Section 3, and don’t miss Section 1.
Section 3:

Basic Checklist for Hiring a Farm Employee in Maine

Introduction 46

Checklist Summary 46

Checklist with Explanation 47

If you plan to offer less than the minimum wage, verify your eligibility 47

If you do not plan to provide overtime, verify your eligibility 52

Follow laws of payment, notice requirements, and working conditions 52

Secure a workers’ compensation policy 53

Verify eligibility to work in the United States 54

Set up to withhold federal and state income taxes 55

Set up to withhold federal Social Security and Medicare contributions from the employee’s wages 56

Arrange to pay the farm’s contribution to the employee’s federal Social Security and Medicare account 56

Arrange to pay federal and state unemployment tax, if required 57

Conclusion 58
Introduction

Hiring a farm employee is an exciting moment. It means the farm is getting large enough and stable enough to take on additional help. On the downside, the paperwork requirements of hiring feel much less exciting. Getting familiar with the process early is a tremendous help. Farm owners should start preparing well before the new employee begins their first day of work. This checklist will help farmers understand the basic paperwork process for hiring a farm employee.

Although it’s a useful starting point, this checklist does not explore every single area of farm employment law. It does not address wage-related recordkeeping, workplace safety laws, in-kind wage rules, and many other employment law matters. It’s simply a concise checklist of select legal issues at the time of hiring. Farmers should also consult Farm Commons’ other employment law resources for more information.

Farm Commons aims to help farmers get started, but moving through the checklist can lead to more questions than answers. On the positive side, knowing the right questions to ask is half the battle. Unfortunately, easy answers are often hard to come by. Calling the relevant agency, such as the Maine Department of Labor, Maine Revenue Services, United States Department of Labor, or the Internal Revenue Service, is an excellent next step when complications arise. Agency employees are trained experts and able to answer most questions. Some farmers will prefer to contact an attorney with experience in farm employment law, which is always a good choice as well.

The Summary Checklist

□ If you plan to offer less than the minimum wage, verify your eligibility
□ If you do not plan to provide overtime, verify your eligibility
□ Follow laws of payment, notice requirements, and working conditions
□ Secure a workers’ compensation policy
□ Verify eligibility to work in the United States
□ Set up to withhold federal and state income taxes
□ Set up to withhold federal Social Security and Medicare contributions from the employee’s wages
□ Arrange to pay the farm's contribution to the employee's federal Social Security and Medicare account

□ Arrange to pay federal and state unemployment tax, if required

Checklist with Explanations

□ If you plan to offer less than the minimum wage, verify your eligibility.

The Maine minimum wage is higher than the federal minimum wage. Maine’s minimum wage is currently set at $11.00 per hour while the federal minimum wage is currently set at $7.25 per hour. The Maine minimum wage will increase to $12.00 on January 1, 2020 and each year thereafter it will increase by the increase of the cost of living, if any (i.e., consumer price index).

While most businesses in Maine must pay at least the Maine minimum wage, both Maine and federal law provide an agricultural labor exemption to minimum wage requirements. Maine law exempts agricultural employees from minimum wage entirely. Federal law only exempts employees who perform agricultural labor for farms under a certain size, which is based on a measure called “man-days.” This means that, depending on their size, farm businesses may have to pay employees performing agricultural labor at least the federal minimum wage. Also, if a farm has employees who perform tasks that are not considered agricultural labor, the farm will need to pay these employees at least the Maine minimum wage. Maine farm businesses must pay close attention to the rules if they wish to avoid the risks of noncompliance.

Again, Maine law entirely exempts employees who perform agricultural labor from the higher Maine minimum wage. The federal minimum wage exemption is more limited. Federal law only exempts Maine farms with 500 or fewer “man-days” of agricultural labor in each calendar quarter of the previous year. To put it another way, farms that used more than 500 man-days of agricultural labor in any calendar quarter of the last year are exempt from the higher Maine minimum wage; however, they must pay employees at least the federal minimum wage of $7.25. Farms that used 500 or fewer man-days in each calendar quarter of the previous year are exempt from having to pay both the Maine and federal minimum wages.

This rule sounds complicated. What is a man-day? What is agricultural labor?
These are important questions with detailed considerations. The flowchart below will help farmers breakdown the rule and determine whether the federal minimum wage applies to their farms. (Please do not use the flowchart without also reading the text below it, as it is necessary to effectively use the flowchart.)

**Box 1:** Determine how many man-days you had in each calendar quarter last year. (Calendar quarters are Jan–Mar, April–June, and so forth.) You earn one man-day each time one person shows up for at least one hour of work. Did you have less than 500 man-days in each calendar quarter of the previous year?

- **YES**
- **NO**
  - I don't know and/or I don't have records

**Box 2:** You meet the scale requirement to be eligible to pay less than the minimum wage to farm laborers in the current year. Do your employees perform exclusively agricultural labor?

- **YES**
- **NO**
  - No, it's all non-ag
  - No, the work is some of both

**Box 3:** The farm is not required to pay at least the minimum wage.

**Box 4:** All employees must be paid at least the federal minimum wage.

**Box 5:** The farm must pay at least the higher Maine minimum wage for all hours worked in any week where any non-ag labor is performed.

Box 1: The first step is for a farm to determine how many man-days the farm had in each calendar quarter last year. A man-day is any day on which a person does at least one hour of work. Each person who works is counted as a separate man-day. For example, if three individuals work for one hour each on the same day, the farm has three man-days. If three individuals work for eight hours each on the same day, the farm still has three man-days. As long as the person worked...
at least one hour in a day it is considered a man-day; it doesn’t matter how long they worked.

The spouse, children, and other members of the employer’s immediate family are not counted when calculating man-days. Roughly, 500 man-days equates to about five to six full-time employees, considering many farms employ workers six or seven days per week.

Now that we understand how a man-day is calculated, we need to count them. Divide the calendar January through March, April through June, July through September, and October to December. Now, determine the number of man-days in each calendar quarter. Do you have less than 500 man-days in each one? If the answer is yes, the farm is eligible for the minimum wage exemption (go to box 2). If the answer is no, the farm is not eligible for the exemption and must pay at least the minimum wage (go to box 4).

These calculations require careful record keeping. Remember that the 500-man-day rule applies to the previous year. To determine federal minimum wage obligations this year, we need to determine the farm’s man-days last year. If records were not kept last year or are not detailed enough, we will have a hard time demonstrating compliance with the law. In that case, the safe choice is for the farm to act as if the federal minimum wage requirement applies (go to box 4).

Box 2: We arrive at box 2 because we know we are at the acceptable size—we are under the 500-man-day threshold. Thus, we know we are eligible to pay less than the federal minimum wage. Now, we have one more question to ask to determine if we can actually pay less than both the federal and Maine minimum wages.

Both the Maine and federal agricultural labor exemptions apply only to agricultural labor. If an employee spends any time working on something that is not deemed agricultural, neither the Maine nor the federal minimum wage exemption applies. This means the farm must pay the employee the higher Maine...
minimum wage. What’s more, these exemptions do not apply with respect to all work—including agricultural labor—performed by that employee during that entire workweek. This means that if a farm employee spends even one hour of time on a non-agricultural task, the employee must be paid at least the higher Maine minimum wage for all hours worked in that week.

Whether work is agricultural labor under the law is not always intuitive. That’s because it’s based on legal definitions. It is also because the definition of “agricultural” has not been litigated very much in either the courts of Maine or federal courts. Litigation helps clarify legal definitions. For now, we’re left with a broad definition that does not account for the realities of modern and direct-to-consumer farms.

Diversified farms are sprouting up in Maine and throughout the country. These farms typically engage in activities—such as selling at farmers’ markets, making value-added products, organizing on-farm events, and so on—that fall outside the traditional scope of farming activities. Unfortunately, the legal definition of agricultural labor has not yet evolved to meet this new type of diversified farm. Without any statutes or case law for guidance, it can be challenging to draw the line between agricultural and non-agricultural labor.

Agricultural labor certainly includes growing and harvesting crops, raising livestock or poultry, and preparing unmanufactured farm products for market and delivery to market. Generally, agricultural labor includes work done on a farm in connection to farming operations. Conversely, most if not all work done off farm is likely not farm labor. For example, because sales at a farmers’ market are conducted off the farm they are most likely not agricultural labor. Similarly, marketing activities such as pitching products to restaurants and grocery stores are likely not agricultural labor. In addition, some work done on a diversified farm is tangential to agricultural production, for example, making value-added products, planning and hosting agri-tourism, or on-farm events such as dinners, weddings, and potlucks. These activities most likely do not fall within the agricultural labor definition. Aggregating and packing products from another farm, for example into a CSA box, is a gray area. Most likely, it would not be considered agricultural labor as it’s more akin to marketing and providing value to the customer, more so than agricultural production.

The safest route is to assume that off-farm activities and any activities that are tangential to farming, such as those just mentioned, are not agricultural labor.
A farm can quickly resolve any legal risk by paying at least the Maine minimum wage and paying overtime for any hours worked over 40 in a week to all employees. If the farm pays at least the minimum wage plus overtime, there is no need to determine if tasks are agricultural or not.

Box 4: All employees must be paid at least the federal minimum wage.

Box 4: If the work assigned to an employee is non-agricultural, then the higher Maine minimum wage is owed—as neither the Maine nor federal minimum wage exemption for agricultural labor applies.

Box 5: The farm must pay at least the higher Maine minimum wage for all hours worked in any week where any non-ag labor is performed.

Box 5: Again, when an employee does non-agricultural labor, the employee is owed the higher Maine minimum wage for the entire workweek, not just for the non-agricultural hours worked. As a reminder, farms need to keep complete records to demonstrate compliance with minimum wage law. Timesheets recording the date, hours worked, and tasks performed are essential, even if no minimum wage is owed. The records are necessary to show that minimum wage is not owed.

Box 3: The farm is not required to pay at least the minimum wage.

Box 3: If we arrive here, then the hours worked by the agricultural employee do not fall under minimum wage laws. When a farm is under the 500-man-day threshold last year and assigns only agricultural labor tasks, the farm is allowed to pay less than the minimum wage. Now, that doesn’t mean no rules apply to the wage-payment relationship. Of course, the farm is obligated to pay the employee whatever the farmer said the employee would be paid for the work. If a farmer promises to pay $3 per hour and then pays the employee just $2 per hour, the farm could certainly be sued by the employee for breaking that promise. The
farmer couldn’t be sued under minimum wage laws, but laws covering our mutual agreements and contracts still apply.

☐ **If you do not plan to provide overtime, verify your eligibility**

Farms are exempt from paying overtime to farm employees under Maine and federal laws, regardless of the size of the farm. Just as with minimum wage, the federal exemption to paying overtime only applies to agricultural labor. If the employee performs non-agricultural labor, the farm must pay at least the federal overtime rate for all hours worked over 40 in that week (i.e., 1.5 times the federal minimum wage per hour worked over 40). If the employee performs exclusively farm labor in a week, no overtime is owed for hours worked over 40.

The Maine overtime exemption is broader than agricultural labor, or on farm tasks related to farming. The Maine overtime exemption also applies to workers who process, preserve, can, freeze, dry, market, store, pack for shipment or distribute agricultural produce, meat and fish products, and perishable foods. This means that the farm does not need to pay the higher Maine overtime rate for workers performing these tasks; however, the farm must still pay the federal overtime rate.

☐ **Follow laws of payment, notice requirements, and working conditions**

Maine’s laws related to payment of wages and employment conditions apply regardless of whether a farm is exempt from minimum wage or overtime requirements. Farms must pay workers at regular intervals that are at least every 16 days. Each payment must include all wages earned to within eight days of the payment date. Farms must provide a pay stub with each payment that includes the date of the pay period, the hours, total earnings, and all itemized deductions. Any changes to the pay rate must be communicated at least one day in advance. All employers must also display a poster notifying employees of the minimum wage rules. This poster and other required posters can be found on the Maine Department of Labor website: https://www.maine.gov/labor/posters/. The posters can also be found by searching for the agency name with the phrase “mandatory posters.”

Maine labor laws require employers to give employees at least a 30 minute break after six hours of work if three or more workers are on duty. The employer and employee can negotiate more or less breaks, but both must agree (this should be in writing). Employees performing agricultural labor tasks are exempt from these
requirements. However, farms that have three or more employees on duty would need to provide breaks or negotiate a mutual understanding with workers who perform non-agricultural tasks.

- Secure a workers’ compensation policy

Maine provides smaller farms several exemptions to carrying workers’ compensation. Even so, these farms must still secure some form of employers’ liability insurance for their employees.

Farms that have only seasonal or casual employees who engage in agriculture labor are exempt from having to secure workers’ compensation if the farm maintains at least: (1) $25,000 in employers’ liability insurance and (2) $5,000 in medical payments coverage. In this context, “casual” means infrequent or occasional and “seasonal” refers to workers who begin after the planting or seeding season and end at or before harvest.

In addition, a farm that either has six or fewer agricultural workers at a given time or has a weekly payroll total that does not exceed 240 hours at any time for 52 weeks do not have to secure workers’ compensation if the farm maintains at least: (1) $100,000 in employer’s liability insurance multiplied by the number of full time workers and (2) $5,000 in medical payments coverage.

Like the minimum wage exemption, the above workers’ compensation exemptions only apply to agricultural labor. Even if the farm meets the exemption threshold, it must at least carry workers’ compensation for any employee who engages in non-agricultural labor tasks.

Other exemptions to workers’ compensation in Maine include a sole proprietor, partner, and owners of LLCs. While such farm owners are exempt from carrying workers’ compensation for themselves, they still must carry it for their employees unless another exemption applies.

In addition, individuals owning 20% or more voting stock of a corporation may waive their benefits in workers’ compensation by filing an Application of Waiver with the Maine Workers’ Compensation Board. Parents, spouses or children of sole proprietors, partners, LLC owners, or corporate owners with 20% or more voting stock may also waive their workers’ compensation benefits by filing an Application of Waiver.

Farms in Maine have several options for securing workers’ compensation. They
can purchase it from one of over 300 companies authorized to sell workers’ compensation in Maine. Cost and services vary considerably from company to company. Beginning farms with no record of claims experience or farms having difficulty obtaining workers’ compensation coverage can contact the Maine Employers’ Mutual Insurance Company (MEMIC). MEMIC is required to provide workers’ compensation coverage to employers who cannot obtain insurance elsewhere.

Alternatively, farms can obtain approval to self-insure individually or as a group. To do this, the farm would need to file an application with the Maine Bureau of Insurance, Self-Insurance Division. For information on self-insurance, contact the Self-Insurance Division at (207) 624-8475.

Overall, the cost of workers’ compensation is determined by several factors including the classification of the labor performed, the frequency of injuries by workers performing that labor, and the total dollar value of the business’ payroll, among other factors. For farm businesses that use only traditional employees and pay cash (not in-kind) wages, a quote is easy to come by. Farm businesses that pay wages in the form of food and lodging may have a harder time determining the value of their payroll and will need to work more closely with their insurance providers. Likewise, a farm seeking coverage for interns, volunteers, and other non-traditional employees may need to work closely with their insurance provider to ensure coverage is secured for all individuals performing work for the farm. Insurance rates may vary, so farms may want to contact several different authorized carriers to compare rates.

- **Verify eligibility to work in the United States.**

Farms may only hire individuals who are eligible to work in the United States. The employer satisfies the duty to verify eligibility by properly completing Form I-9 (for employees not hired through a worker program). This form is available from the U.S. Citizenship and Immigration Services agency. It is available [online](https://www.cis.gov/working-in-the-united-states/i-9-form) and instructions are included. The form is not submitted to the agency. Rather, the employer copies the necessary documentation and keeps the form on file. The completed forms should be kept for the longer of the following: (1) three years after the worker began employment, or (2) one year after the worker leaves the position. The forms and documentation must be available if an enforcement
PAYROLL TAX

agency inspects the farm.

☐ **Set up to withhold federal and state income taxes.**

Farms are required to withhold a percentage of an employee's wages and remit the withheld portion to both the IRS and the Maine Department of Revenue.

A farm must begin withholding state and federal income taxes when either of the following happens: the farm pays a total of $2,500 or more in wages to all employees performing agricultural labor, or any individual employee performing farm labor receives cash wages of $150 or more per year. Most farms with an employee will have to withhold income taxes. Note too that this rule applies only for farm labor. Farms employing workers performing non-agriculture tasks must withhold state and federal income taxes once any wages are paid.

To begin the federal income tax withholding process, the farm needs a completed IRS Form W-4 from the employee. This form allows employees to choose the number of withholding exemptions. Form W-4 is not sent into an agency; it remains in the farm's files. The farm then uses the tax tables in IRS Publication 15 (Employer’s Tax Guide) to determine the withholding amount per paycheck based on the individual's pay, exemptions, and payment frequency. Form W-4 and the Employer’s Tax Guide can be downloaded from the IRS website: https://www.irs.gov/. The farm must record the amount withheld and remit it to the IRS. The due date is dependent on the total tax owed. For most farms, the tax must be deposited monthly.

The IRS uses an online system, the Electronic Federal Tax Payment System (EFTPS), and deposits must be made electronically. Farms must register with the EFTPS system ahead of time as it can take a few days to receive the passwords. Registration can be completed at https://www.eftps.gov/eftps/.

To begin the withholding process in Maine, farms must create an online tax account with Maine Revenue Services (MRS). There is no fee to register with MRS. All new employees must complete form W-4ME, which can be downloaded on the MRS website. Farms must either file quarterly or semi-weekly withholding reports and an annual reconciliation report. The schedule will depend on the amount of Maine income tax withholding the farm reported the previous year. The annual reconciliation report is due by February 28. These reports must be electronically filed on Maine Revenue Services website using the
**PAYROLL TAX**

I-file system for payroll taxes

Several different methods are permitted for calculating how much state income tax to withhold. For more information, check the latest version of the publication Maine Withholding Tables for Individual Income Tax. The publication is updated each year and is available for download from the MRS website.

- **Set up to withhold Social Security and Medicare contributions from employee wages.**

Most farms are required to withhold Social Security and Medicare taxes from the worker's paycheck. The same rules apply as for withholding federal income tax: The obligation begins when the farm's total payroll for employees exceeds $2,500 or an individual's wages exceed $150 per year.

Where the amount of income tax to withhold is determined by using the IRS’s tables, Social Security and Medicare taxes are calculated as percentages of the employee’s wages for that pay period. The most recent percentages will be listed in IRS Publication 51 (Agricultural Employer’s Tax Guide). Currently, 6.2% of wages are withheld for Social Security and 1.45% for Medicare. Each time the employee receives a paycheck, a portion of the Social Security and Medicare taxes are withheld. This is then remitted to the IRS through the same EFTPS process used for remitting withheld income taxes.

- **Arrange to pay the farm’s contribution to the employee’s Social Security and Medicare account.**

The checklist item above explains that a portion of Social Security and Medicare taxes owed by the employee must be withheld from the employee’s paycheck. This checklist item discusses the Social Security and Medicare taxes owed by the employer. **These are two different taxes—the employee is taxed and the employer is taxed.** The employee’s tax is deducted from wages. The employer’s tax is paid by the employer, and may not be deducted from wages. The taxes go to the same agency for the same ultimate purpose, but are separate.

The farm is taxed at the same threshold where the employee must be taxed. (See the $2,500 or $150 rule above.) Currently, the farm is taxed at the same rate as the employee, although this may change—6.2% of wages are withheld for Social
Security and 1.45% for Medicare. The most recent percentage will be listed in IRS Publication 51 (Agricultural Employer’s Tax Guide).

Although the employee’s and employer’s shares of Social Security and Medicare taxes are technically separate, they are deposited at the same time through the IRS’s EFTPS process.

Farmers who work with a payroll service provider can escape the details of withholding and remitting taxes. Payroll service providers help employers determine which taxes are owed and assist in coordinating payment of the taxes. Farmers who can afford a payroll service may find it well worth the money.

Arrange to pay federal and state unemployment taxes, if required.

Unemployment tax is paid by the farm and is not deducted from an employee’s wages. This tax contributes to a compensation fund available to individuals who have become unemployed. Most employers are required to pay unemployment tax immediately; however, farms are exempt until the operation reaches a certain size. Maine and the federal government follow the same rules for farms. When a farm owes unemployment tax to the federal government, the farm will also owe it to the state.

The farm must begin paying federal and state unemployment taxes when either of the following happens: (1) the farm pays wages of $20,000 or more to workers during any calendar quarter of the previous two years; or (2) the farm employed 10 or more workers for any part of a day (even if not at the same time during the day) during any 20 or more weeks in the last year, or in the year before that. After a farm crosses either threshold, the farm must begin paying into federal and state funds.

The farm will pay federal unemployment tax on up to $7,000 of each employee’s wages. The tax is determined by percentage; the latest percentage is listed in IRS Publication 51. Federal unemployment tax is paid through the same EFTPS procedures as income withholding and Social Security/Medicare taxes.

The farm will pay Maine unemployment tax on up to the state’s current taxable wage base for the calendar year. The taxable wage base was $12,00 in 2018. Each year, the farm will receive a “Notice of Contribution Rate” (Form ME TAX-13). It explains how the individual rate for a calendar year was determined. There are a number of factors considered when computing an employer’s tax rate, such
as the annual taxable wages of the employer, benefit charges, and contributions paid.

The Maine unemployment tax is paid by filing quarterly unemployment contributions. Businesses can file and pay unemployment contributions electronically on the ReEmployME portal (https://www.maine.gov/reemployme) or they can file the paper ME UC-1 form with the Maine Department of Labor. Quarterly Reports are due no later than 30 days after the end of a calendar quarter (i.e., April 30, July 31, October 31, and January 1).

Just as with minimum wage, overtime, and workers’ compensation, the rule above is for farms assigning farm labor to their employees. For non-farm enterprises (which may include diversified farms engaging in separate, non-agricultural enterprises, such as packing other farmers’ produce, hosting on-farm events and agri-tourism, and so on as discussed in the minimum wage section), farmers may need to follow the regular unemployment tax rules.

For non-farm businesses, federal and state unemployment tax is owed when either of the following happens: (1) the business has one or more employees during some portion of a day in 20 different calendar weeks in either the current or prior year (whether consecutive weeks or not); or (2) the business paid out $1,500 or more in gross wages during any calendar quarter of the current or previous year.

**Conclusion**

This checklist illustrates selected, immediate paperwork responsibilities of the farmer at the time of hiring. It also reveals that the farmer’s responsibilities don’t stop there—the law requires ongoing recordkeeping, withholding, remitting, and payment responsibilities. If a farm creates a clear, consistent system for hiring, tracking payroll, and calculating taxes, employment paperwork burdens can be minimized. For farmers who don’t enjoy creating these procedures and can afford modest fees, accountants and payroll service providers will be happy to handle this aspect of hiring. To find a local service provider, ask other farmers if they have a recommendation.

This resource guides farmers in the initial steps necessary to hire an employee; it does not discuss many other tax aspects of hiring. For example, employers must keep certain records and must provide specific documentation to employees at
the end of the year. Payroll service providers and Small Business Administration offices can help, and the IRS provides information in many publications. Farmers may want to read IRS Publication 5 (Agricultural Employer’s Tax Guide), Publication 15-B (Employer’s Tax Guide to Fringe Benefits), and Publication 225 (Farmer’s Tax Guide).

Be sure to check out these and many more resources on employment law and other legal issues that are relevant to sustainable farmers. All of Farm Commons’ resources are available for free download at www.farmcommons.org
