An innovative, low-cost vegetable machine platform that uses furrow-guidance will be demonstrated for several different vegetable crop operations, including: laying drip tape, seeding, transplanting, thinning, and cultivating. Learn more about this machine system at www.uky.edu/bae/innovations-market-growers.

A 'Polyplanter' that seeds directly into plastic-covered beds with precision accuracy will also be demonstrated.

The College of Agriculture, Food and Environment is an Equal Opportunity Organization.

Educational programs of Kentucky Cooperative Extension serve all people regardless of race, color, age, sex, religion, disability, or national origin.
