

## Figure Legend

**Figure 1.** Concentration of spinosad (spinosyn A, ppm) in onion plant tissue ( $\mu\text{g}$  spinosad/g plant tissue) and soil ( $\mu\text{g}$  spinosad/g dry soil)  $\pm$ SEM (A), and cumulative percentages of plants killed by first-generation *D. antiqua* ( $\pm$  95% CL) (B) in a New York onion field at time points measured days post planting (DPP). In damage evaluations (B), asterisks (\*) indicate significant differences between treatments (Tukey,  $P < 0.05$ ).
