

Figure 7. Seed retention per Italian ryegrass plant (%) in relation to calendar days in a) 2017, b) 2018, and c) all years. The parameters in the equations indicate the percentage of seed retention on July 15 for the Dixie Farm and August 1 for the Albion and WSUCAF Farms, and the rate of seed shedding. Dotted vertical lines indicate July 15 and August 1. Dots with symmetrical lines (standard errors) indicate experimental data and curves represent the fitted models (Note: vertical bar for the Albion and WSUCAF Farms is the same for both years). Dark blue curve in figure c indicates the average of the three years.
