

Figure 1. Cover Crop Biomass in monoculture and mixture cover crop plots at termination, grouped by the number of species in each mixture.

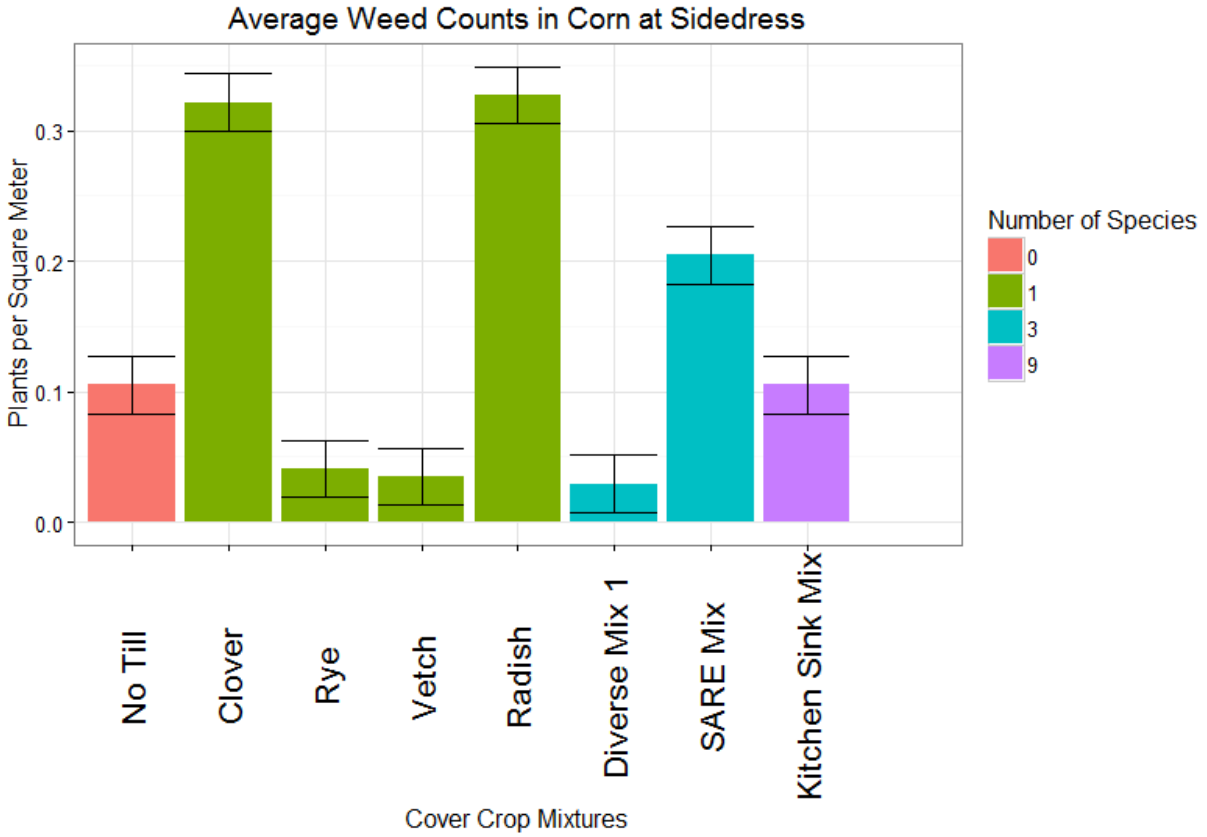

Figure 2. Average number of weeds per square foot in cover crop plots at sidedress. Number of species refers to the number of cover crop species in the mixture.

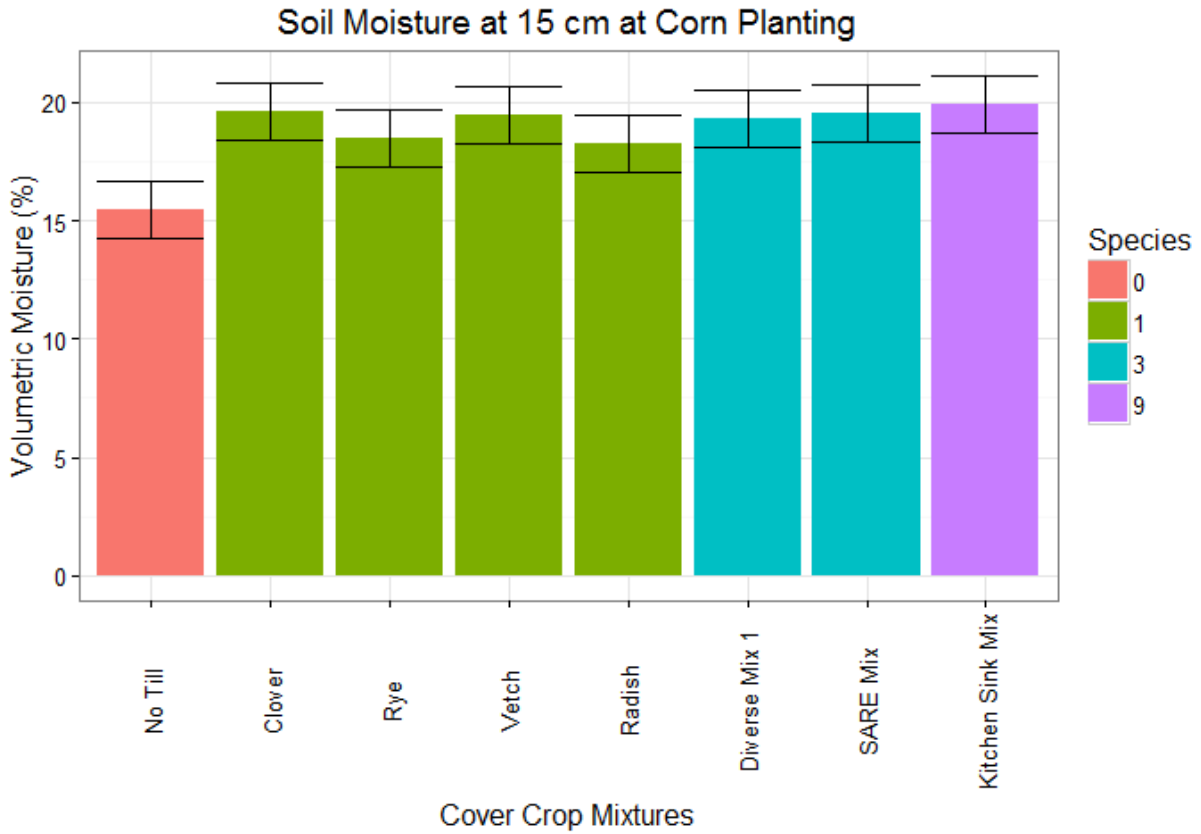

Figure 3. Volumetric soil moisture (%) at 15 cm depth, at the time of corn planting. Species refers to the number of cover crop species in the cover crop mixtures.

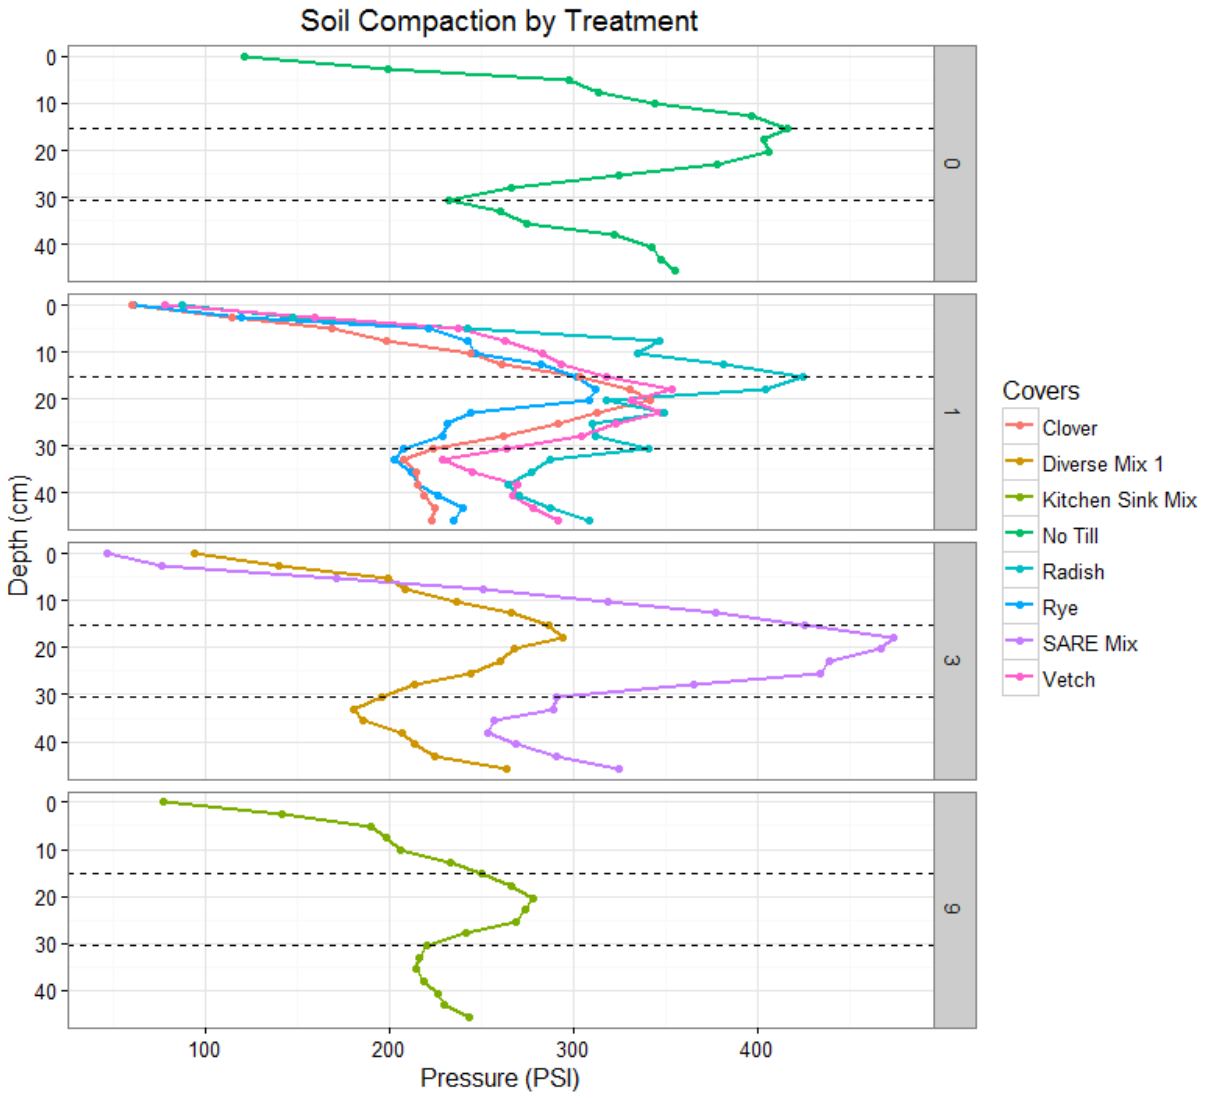

Figure 4. Soil Compaction (psi) by depth under cover crop treatments with divided by number of species in the mixture (0, 1, 3 or 9).
