

Dear organic grower:

You have been selected as an exemplary farmer/grower to help improve the existing Roxbury Farm Crop and Harvest manual. While the Roxbury Crop and Harvest Manuals have proven to be a great help to beginning farmers, we need you to help us to improve them by including information about other growers' systems.

We are asking you to share your information on three to five crops. By including your growing systems, we will be able to offer a range of plant populations, yield prediction, cultural practices and other pertinent data in the newly edited manuals. Please take the time to carefully answer the questions, preferably with access to several years of crop records. This new manual will only be as good as the answers you provide.

In return for answering our questions on three to five of the listed crops in the survey, which we anticipate will take approximately one hour, we will compensate each grower with \$50.00 and you will also be listed as a contributing grower. In order to process and sending you a check you will need to fill out your name, farm name and mailing address at the beginning of this questionnaire. If you do not fill out this information, we will not be able to compensate you.

This project is funded by Northeast SARE. Thank you SARE!

Sincerely,
Jean-Paul

Please provide your name, farm name, and the address where we can send a check.

Which 3-5 crops do you think you grow best? This will be used to gain more comprehensive information about your production systems for those crops

How do you keep track of your production and harvest records for any or all crops? Do you have record templates that you are happy with that you would be willing to share?

If you are willing to share your production and harvest records, you can upload them here or email them to jeanpaul@roxburyfarm.com

Drop files or [click here to upload](#)

Which crops are most challenging for you to produce reliably and consistently every year?

Why do you think those crops are difficult for you? Do you think there is a lack of applicable production resources for those crops? What sort of resources would you like to see developed to better support your production of those crops?
