Figure 2 Effect of trans-cinnamaldehyde (TC) at 0.4, 0.8, and 1.0% on Aspergillus flavus NRRL 3357 and Aspergillus parasiticus NRRL 4123 growth and aflatoxin production in poultry feed. Data are the mean \pm SEM obtained from 3 separate experiments with duplicate samples on each sampling time point (0, 1, 2, 3, 4, 8, 12 week). Error bar indicates SEM (n=6/treatment). Fig. 2A and 2B show the growth of A. flavus and A. parasiticus, respectively, whereas Fig. 2C and 2D show AF production by the molds.
