

Sugaring Role-Play

ADAPTABLE FOR DIFFERENT AGE GROUPS
15–30 MINUTES

MATERIALS

- Sugarmaker's Classroom Visit Tool List

INSTRUCTIONS

Student volunteers play the roles of trees, workers, and the mainline as you guide them in acting out each step of tapping a sugarbush. Introduce students to the materials and tools required as you role-play. Elements of the role play can include:

- Place the maple trees in the forest.
- Workers measure tree diameters to make sure they're large enough to tap.
- Set up the 1" mainline and use a tool to cut a hole and attach a saddle.
- Workers string lateral lines between the 1" mainline and the trees.
- Workers place a drop and spout on the lateral very close to each maple tree.
- Workers tap each tree with the drill (having removed drill bit for safety).
Use hammer to pretend to hammer in the spout.

For younger students, simplify the role-play or do a guided imagery where students imagine being a drop of sap going through the sugaring process from tree to bottle.

This material is based upon work supported by the VT Agency of Agriculture "Local Food Marketing Development" grant programs and the Northeast SARE subaward ONE18-323.
