

Swine Nutrition

for pasture-based operations

What should I feed my pigs?

Pigs are monogastric, opportunistic omnivores that need properly balanced proteins, fats, fiber, vitamins and minerals to maintain optimal health.

Pigs Need TFR + Supplementation

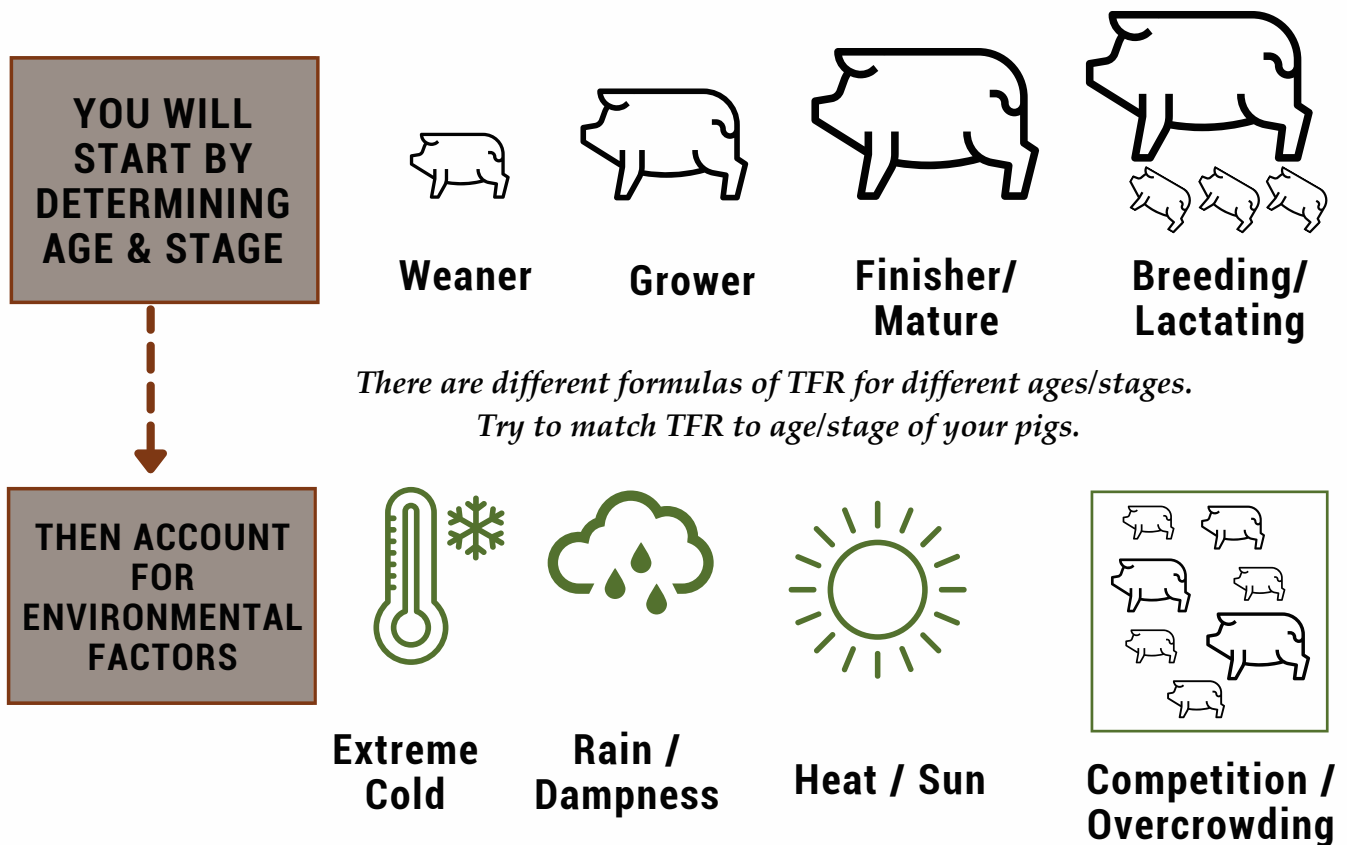

Let's talk about water!

PIGS NEED 24/7/365 ACCESS TO CLEAN WATER IN ORDER TO PROCESS FEED PROPERLY

Using water systems that keep pigs **OUT** of the water is ideal. (make wallows separately). Do not allow pigs to drink from natural waterways.

How much should I feed my pigs?

Feed an **AVERAGE** of 2-3% body weight of TFR + Forage (quality hay/grazing). Adjust accordingly taking into account factors above.

All supplementation besides forage (hay/grass) should be given in limited quantities.
