

Table 3. Predation on wax moth (*Galleria mellonella*) sentinels in corn monocultures and in corn possessing a mix of interseeded cover crops. Data represent mean \pm SEM percent consumed. Asterisks next to one-way ANOVA results represent significant treatment differences ($\alpha = 0.05$).

Site year	Wax moth sentinels eaten		ANOVA
	Cover Crops	Monoculture	
Canby	93.3 \pm 4.1	17.5 \pm 3.4	F _{1,7} = 201.9, P < 0.01*
Pierre	22.5 \pm 8.1	33.3 \pm 2.4	F _{1,7} = 1.65, P = 0.25
Estelline	31.3 \pm 7.7	23.8 \pm 9.7	F _{1,7} = 0.37, P = 0.57
Gary-17	35.0 \pm 5.3	15.6 \pm 5.0	F _{1,7} = 7.01, P = 0.04*
Across site years	45.5 \pm 7.7	22.6 \pm 3.2	F _{1,31} = 27.6, P < 0.01*
