

What is Composting?

What is composting?

Composting is a form of waste disposal where organic waste decomposes naturally under oxygen-rich conditions. ... The final **compost** product, often called humus, is full of good nutrients and can be used to fertilize plants, amend poor soil and aid in water retention. (www.study.com)

Types of composting

Aerobic Composting

- Turn every day or every few days
- Add green material and keep moist
- Can be stinky at times if not moist or turned enough

Anaerobic Composting

- Throw material in and leave it alone
- Can take a year or more to breakdown
- VERY SMELLY

Vermicomposting

- Uses composting worms to help breakdown material
- No need to turn because the worms do the hard work
- Very little odor
