

traditional NM seed saving

native methods
maintain genetic
diversity

**high plant
population**

- **maximum
diversity of
pollen & ovules**
- **seed w/full
range of varietal
genetic diversity**

Hopi corn field

- **deep sand requires deep planting**
- **deep planting requires multiple seeds per hole**
- **larger population = increased genetic diversity**

chile nativo

- **direct-seeded**
- **high-clay soil compaction requires multiple seeds per hole**
- **larger plant population = increased genetic diversity**

<http://www.savenmseeds.org/>

**four species of squash commonly raised in North America
which *DO NOT* readily cross**

Cucurbita maxima includes Hubbard, Turban, Buttercup...

Cucurbita moschata includes Butternut, Tahitian...

Cucurbita mixta (aka *agyrosperma*) includes all Cushaws...

Cucurbita pepo includes yellow summer, Zucchini, Pattypan,
Halloween Pumpkin, Delicata...

also crosses with small decorative gourds

SQUASH

FAMILY *Curcurbitaceae* **GENUS** *Cucurbita* **SPECIES** *sp.*

POLLINATION insects **ISOLATION DISTANCE** ½ mile or more

typical fruit types by species

typical leaves by species

typical flowers by species

typical peduncles by species

typical seed types by species

BEANS, common

FAMILY *Fabaceae* **GENUS** *Phaseolus* **SPECIES** *vulgaris*

POLLINATION insects **ISOLATION DISTANCE** 20 – 100 feet

***NONE** of these legumes will cross with each other*

Cicer arietinum **garbanzo**

Glycine max **soy bean**

Lens esculenta **lentil**

Phaseolus acutifolius **tepany**

Phaseolus coccineus **runner**

Phaseolus lunatus **lima**

Phaseolus vulgaris **common**

Pisum sativum **pea**

Vicia faba **fava**

Vigna unguiculata **cowpea/blackeye**

BARRIERS to deflect and slow pollinators

~

**plant these as an intervening
crop, as a wall, or as a
surrounding “room”:**

- **grain (not forage) sorghum**
 - **sunflower**
 - **corn**

~

**make use of buildings, walls and
natural features**

12 PLANT FAMILIES OUT OF 1000s

ASTERACEAE artichoke, lettuce, sunflower, sunchokes

AMARYLLIDACEAE chives, garlic, leeks, onions, shallots

BRASSICACEAE broccoli, cauliflower, collards, kale, mustards, turnip

CHENOPODIACEAE beets, quinoa, spinach

CUCURBITACEAE cucumbers, melons, squash, watermelons

FABACEAE beans, peanuts, peas

LABIATAE basil, mint, thyme, etc

MALVACEAE okra, cottonseed

POACEAE barley, corn, millet, rice, rye, sorghum, wheat

ROSACEAE almonds, apples, blackberry, cherry, nectarines, peaches,
pears, plums, raspberry, rose, strawberry

SOLANACEAE eggplant, peppers, potatoes, tomatoes

UMBELLIFERAE carrots, dill, fennel, parsnips

VITACEAE grapes
